KeySIM backs Fieldmark AI’s farm technology trial with 30 IoT SIMs

Wednesday 4 November, 2026

The UK connectivity provider passed 15,000 live IoT connections by 31 October 2026, as customers move large SIM estates to its multi-network service.

KeySIM, the UK provider of multi-network SIM cards and managed IoT connectivity, has surpassed 15,000 live connections, marking its next major growth milestone.

The company says growth has been driven by businesses seeking flexible connectivity and by migrations from larger providers. Several client migrations are under way, including one customer that has already moved more than 1,000 SIMs to KeySIM.

Many KeySIM customers use SIMs to access equipment remotely. This can reduce the need for site visits, while multi-network connectivity can help improve coverage and keep devices connected—supporting better uptime.

Graham Robinson, Founder and Managing Director of KeySIM, said: “We’re migrating multiple clients from bigger providers, including one who has already moved over 1,000 SIMs. A lot of our customers use SIMs for remote access to equipment, helping them save site visits. That’s where they can see an uplift in uptime as well as coverage.”

The milestone follows KeySIM’s announcement in October 2025 that it had passed 10,000 connections across more than 500 customers. By 31 October 2026, live connections had grown by 50% from that earlier milestone.

NatWest is backing KeySIM’s continued expansion through a new finance facility, which will support investment in the company’s resilient network infrastructure. The backing builds on a relationship that includes Robinson’s participation in the NatWest Accelerator programme in 2021 and 2022.

“NatWest’s support has been pivotal to KeySIM’s growth,” Robinson said. “The finance facility will help us keep investing in the infrastructure and service our customers need as more businesses move their connectivity to KeySIM.”

KeySIM provides multi-network IoT SIMs and managed connectivity for businesses connecting devices, equipment and remote assets. Its services include remote network management and secure private-IP connectivity.
