everteam.discover

Analyze & Organize Information

everteam.discover is a powerful tool that lets you find, organize, classify and manage content located in systems and repositories across your organization

All companies deal with multiple systems that store information (e.g. CRM, ERP, file shares, email, cloud drives). These siloed systems lead companies to lose global control of their information, increasing the costs and risks related to data theft and non-compliance of privacy and retention regulations.

everteam.discover enables you to find, clean, organize and search all your content from a central location, helping you simplify regulatory compliance, preserve sensitive data, migrate documents to archives or the cloud.

With everteam.discover you can

- ✔ Find, organize, enrich, classify information
- ✔ Identify personal & sensitive information
- ✔ Address regulatory & compliance requirements
- ✔ Migrate or archive content
- ✔ Implement records & retention management
- ✔ Provide a 360° view of the information

Primary Use Cases

Illuminate & Remediate Dark Content
Effectively identify and reduce ROT (redundant, obsolete, trivial) and decrease storage costs.

Address Compliance Requirements
Ensure compliance with industry regulations including GDPR, NYDFS, and Gramm–Leach–Bliley.

Apply Policies and Retention Rules
Ensure proper governance of your information by automatically classifying content and applying the right retention rule to each item.
Simplify Content Migration
Reduce the time and cost of migrating your information from one system to another.

everteam.discover

Connect, Analyze, Organize and Govern all Information in Your Organization

Key Capabilities

- Connect multiple data sources (network drives, cloud storage, SharePoint, Exchange...) using plug and play or generic connectors (CMIS, Rest-based API).

- Automate the discovery of duplicate and obsolete content as well as personal and sensitive information.

- Leverage machine learning and human curation to enhance existing metadata by automatically extracting terms, concepts and other entities from raw text or manually tagging and labeling datasets.

- Organize and classify content based on corporate rules, business taxonomy or file plans.

- Move and migrate items from a source system to a target system or application to ensure content preservation of your most sensitive information assets

- Perform advanced searches (language detection, semantic expansion).

- Create personalized self-service dashboards to more efficiently find and retrieve information.

For Information Management Professionals

Ensure company information is secure, accurate and properly governed.

For Business Professionals

Get a 360-degree view of the company's information across silos through self-service search tools and personalized dashboards.
