

This book gives an insight into my personal philosophical approach and understanding as to how the neuromusculoskeletal system responds when things go wrong or don't go to plan for no apparent reason. It is intended for healthcare professionals and anybody interested in understanding a little bit more about themselves.

I am aware that I will likely pose more questions than I can provide answers for, but this is just the start. We must continue to ask questions, as there will always be more questions than answers!
