

ALK+ INTERNATIONAL

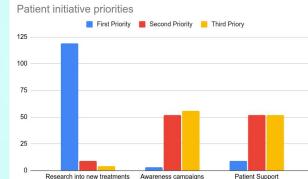

Furthering ALK+ Cancer Research

In February 2022, we asked 131 patients from all over Europe 10 questions about what they wanted from patient organisations.

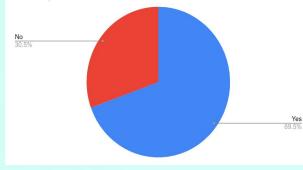

When approving treatments for patient use, how do you think governments should make these drugs available?

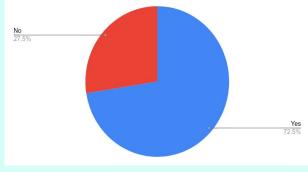

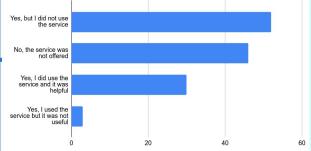

Would you consider entering a clinical trial upon progression, even if you still had further lines of treatment available?

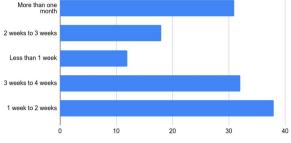

Would you consider surgery or radiotherapy proactively (without progression), if given the option?

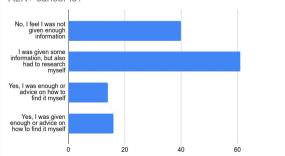

Does your healthcare provider offer counselling, mental health assistance or support services?

ALK+ cancer patients in Europe report how long it took to learn biomarker test results

At diagnosis, were you given enough information about what ALK+ cancer is?

Where would you like ALK+ research projects to take place?
