

24 Hour, Fast, High Quality ICP Sample Data, ISO 17025 Certified Service

Friday 20 May, 2016

Warwick Analytical Service now offers a 24 hour and same day turnaround ICP analysis service. Recent investment in a new state of the art ICP spectrometer has further enhanced our ICP analysis service complementing our other ICP instrumentation. Equipped with modern ICP spectrometers and microwave digestion systems Warwick Analytical Service can provide analysis for a wide range of analytical samples.

For particularly demanding materials, such as metal oxides, metallic catalysts, polymers and geochemical materials, that do not dissolve well by traditional means - high pressure microwave digestion apparatus is used to effectively and rapidly digest samples ready for ICP-OES analysis. The result is enhanced data reproducibility and improved sensitivity.

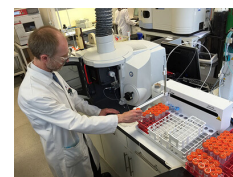

Warwick Analytical Service operates under a ISO 17025 and GMP compliant environment following strict externally audited operating procedures this ensures Warwick Analytical Service are able to provide a high quality ICP analysis service.

Tracie Hart, Laboratory Manager at WAS commented "Achieving the highest quality ICP-OES data across a wide range of elements remains our guiding principle. The new ICP system enhances our ability to cope with higher sample throughput whilst maintaining competitive turn-around times".
