A New Mobile, Educational Solution from Magora

Tuesday 26 April, 2016

One of the freshest project at Magora is our iOS app for active people, Core Power Golf. Our customers this time were two professional golfers from the USA. They sought a leading iOS development company, so, finding Magora, they requested that we create a unique app that acted as a video assistant for players.

Golf is one of humanity's earliest games, and many European nations claim to be the pioneers of its playing. The truth, however, is that it was the Scottish who began to "swing" extensively at the close of the 15th century. Soon after, many surrounding nations were swept off their feet by the sport. Nowadays, golf is one of the most popular sports in the USA, and many Americans want to take part in this prestige game. And that has just been made that much easier by the new iOS app from the Magora's designer team and our unique approach to iOS mobile app development.

iOS Application Development is Par for the Course

Our mobile developers are young and talented guys, they know how to create today's leading apps and they are ready to handle any difficult tasks. As evidence, our customers have received more than 500 successfully completed projects, in the form of both web and mobile apps for their clients and businesses. That's why this mobile golf video instructor with iOS UI design was well within the reach of Magora's experts.

To start, managers cleared up their customers' preferences and the specifics. Our clients hoped to film video lessons on their own and upload them to a dedicated app. According to their plans, other coaches would also appear in this app at a later point in time, and golfers would be able to choose which skills were relevant to them.

Developing an iOS app, Magora programmers, in concert with our customers, decided that a critical feature of this app would be its iOS UI design, as well as the opportunity for users to enjoy its free and commercial content. A complete set of content has been made available for authorized users who pay for their golf education. Having created their profiles, users get to choose their golf level of play and the application selects appropriate video lessons for them. They can then find everything they need to improve their game in different categories:

- Driving Tips
- Short game
- Hook & Slice
- Many more!

You can watch these error correction clips, as well as individual exercises and workouts. Only warm-up videos are able for free and non-authorized accounts, while the main content is reserved for premium users.

Free and Premium Packages

The basic features are configured by an administrator, who publishes videos in specific categories and is also the main coach. In the future, professional golfers will create their profiles and upload their own lessons in Core Power Golf.

In this way, Core Power Golf will become a personal helper and virtual coach for those who want to open the door into a premium golf community and raise their skills. It has one of the best iOS app designs on the market and a user friendly interface. With Magora's new project, Core Power Golf, you can practise not only on the green with a golf pro, but also at your own speed at home or the office by yourself. Watching videos, golfers can hone their skills and show them the next time they are on the back nine.

Thanks to Magora's iOS application development, golf-minded users are now allowed easy access to knowledge, professional golfers, coachs and a longer drive. Read more about the new app here.

Magora is an iOS mobile app development company that is fully capable of implementing the ideas of any customer, no matter how complex they are.From simple video apps for athletes to multi-functional, educational projects, Magora is ready. The extent of features and functionality in each app may vary, but our constant guarantee is that our apps will will work towards your success and provide excellent
