

A whirlwind of a year for Crypto - Introducing DIGI

Thursday 7 September, 2017

2017 has been a whirlwind of a year in the world of Cryptocurrencies, ICO's and Token Sales. Entrepreneurs (and scammers) from across the globe have created new coins and tokens, and Governments have been working on ways to crack down on these practices with China recently banning all its citizens from participating or hosting ICOs.

Sifting through this blur of regulation and finding the perfect ICO has been more and more difficult. There are many things to look out for when investing in a token sale and this brings us onto the following requirements we feel make a good potential:

- An experienced team
- A clear Vision
- A clear Roadmap
- An actual viable product
- Straight to the point no-nonsense whitepaper

DIGI is a new token which ticks all of the above boxes.

DIGI Token is a new coin that will be used within a global digital marketplace. The aim is to make this one of the world's largest digital goods & services platform based on Blockchain. The coin aims to solve three core issues in the digital goods industry which are: copyright issues, high commissions for sellers and the restricted global reach due to country restrictions from payment processing merchants.

DIGI itself represents more than just a coin or marketplace, it envisions the future of downloadable digital goods and services.

The platform will be open for all types of digital goods including e-books, website templates, apps, video, audio, subscriptions, services and more.

The digital goods market is a multi-billion dollar industry that has been expanding year on year. Market research experts assessed the ten main growth factors in digital trade and have predicted that the value of the digital goods market could exceed **\$500+ billion** by 2019.

Two routes of return for token holders

There is a two pronged approach for the use of the DIGI Token. DIGI Token holders will be able to either use their token within trading and exchange platforms or use their tokens to purchase digital goods or services from the DIGI marketplace.

The great news is Digi is offering a 40% bonus for early contributors within the first two weeks of its Token Launch. This means you will receive 840 DIGI Tokens for 1 ETH.

With the combination of a great team, a very viable product and a fixed supply of 98M tokens, DIGI seems to be poised to give a fantastic return for early contributors.
