ABPathfinder Selects Stackify's Application Monitoring Platform to Proactively Monitor & Diagnose its Application

Tuesday 6 May, 2014

Within an hour of installing Stackify we were able to find and fix an issue".

KANSAS CITY, MO, TechEd Houston Tx May 6 2014, - Stackify, the developer of innovative cloud based application monitoring and troubleshooting tools, announced today that ABPathfinder the developer of special education and therapy management solutions, selected Stackify's solution to provide DevOps insight and proactive application health monitoring to its solution.

ABPathfinder, develops education and therapy management solutions that increase the efficiency and effectiveness of special education and autism therapy programs. Their cloud-based solution helps educators and therapists craft lesson plans, as well as collect, graph and analyze performance data. By reducing paperwork and administrative tasks, ABPathfinder maximizes the time and effort invested in each child. The solution provides health professional with a simple to use, highly available, HIPAA compliant solution that relieve them of any IT concerns and allow them to focus on treatment.

To ensure uptime and reliability, using Stackify, ABPathfinder's support and development teams are monitoring their production cloud servers, and get insight into their application behavior. The solution allows them to proactively identify issues in their application with their SaaS based software before they impact the end user. Using stackify they get all the required tools and data to allow them to monitor, diagnose and resolve application issues fast and effectively.

"We are constantly monitoring a variety of parameters including client performance, individual web page performance, errors, trends, server performance and most importantly customer satisfaction which helps us aggregate all the data end-to-end from the customer's perspective." Said Kelly M. Kerns COO, ABPathfinder
"Within an hour of installing Stackify we were able to find a service that was not only not performing but was causing such server contention, that it was causing issues for people who were not even using that service."

"ABPathfinder provides sophisticated cloud based tools to health professionals to ensure better treatment outcomes and we are excited to be the tool helping them. We are helping major hospitals, clinics and treatment centers around the country improve the life of kids with Autism" said Jim Burroughs , VP of sales and business development of Stackify. " ABPathfinder plays a strategic role in tracking treatment progress and allows for better therapy decisions. We are proud to provide ABPathfinder with the tools to take a proactive approach to their support and diagnose and fix issues before it affect their customers."

About Stackify
Stackify provides software developers, operations and support managers with an innovative cloud based platform that allows them to monitor and troubleshoot their applications. Using Stackify, businesses get DevOps visibility and can easily detect and resolve application problems and ensure their customers' satisfaction. The platform combines monitoring, errors, metrics, logs and secure remote access with the relevant context in one platform.
