Amey Selects ARES PRISM Software for Earned Value Management & Reporting

Tuesday 25 May, 2021

Amey, a leading infrastructure services and engineering company, has chosen ARES PRISM project management software to help manage their major rail project in Wales. Amey is currently working on the Core Valley Lines transformation project, part of the South Wales Metro for Transport for Wales.

After evaluating other project tools on the market and how they would work and integrate with their existing systems, Amey selected ARES PRISM project controls software in order to implement effective earned value management, streamline processes with their contractors, and improve reporting.

Simon Rhoden, Infrastructure Services Director at Amey, said: “We needed a robust solution to support us to project manage the transformation of the South Wales Metro. It’s a complex project with many independencies between Amey’s design and operational teams, as well as with our supply chain and partners. ARES PRISM should enhance our visibility and control of the programme to upgrade the network, and improve rail services and reliability for local people.”

ARES PRISM is an enterprise solution that helps manage projects across their entire lifecycle. Amey will be taking advantage of all PRISM modules including cost management, change management, engineering, procurement, contracts, and field management. Additionally, they will be utilising the PRISM Go Contractor Portal which provides external contractors with secure and controlled access to project data with a simple web interface.

“ARES PRISM is an excellent earned value management system for Amey,” Karl Vantine, Managing Director at ARES Software UK, said. “They have extensive experience in the rail infrastructure industry and will be able to use ARES PRISM software to track deliverables and manage project costs.”

ARES PRISM software is utilised across many sectors including infrastructure, rail, oil and gas, energy, utilities, mining, construction, consulting firms, government agencies and more to manage the performance of projects at every stage all within a single platform. Clients enjoy the flexibility of choosing the ARES PRISM products they need to fit their portfolio, whether it is estimating, cost management, engineering management, procurement, document management, contract management, field management, executive dashboards, or our integration platform.
