

Apealea® (paclitaxel micellar) is now available in Germany for the treatment of ovarian cancer

Monday 15 August, 2022

LUXEMBOURG – 15 August 2022 – Inceptua Group – pharmaceutical company and service partner – today announced that Apealea® (paclitaxel micellar) has a published national price listing and is now available in Germany for the treatment of adult patients with first relapse of platinum-sensitive epithelial ovarian cancer, primary peritoneal cancer, and fallopian tube cancer in combination with carboplatin.

Apealea is the first Cremophor-free formulation of paclitaxel approved in combination with carboplatin for ovarian cancer¹. Inceptua has the exclusive right to distribute and commercialize Apealea in the EU, Norway, Iceland, Liechtenstein, Switzerland, and the UK.

Stefan Fraenkel, Chief Executive Officer, Inceptua Group, says:

“We look forward to bringing this treatment to patients as we continue our launch of Apealea throughout Europe. We believe there is great potential for Apealea, and the launch in Germany is an important milestone for Inceptua.”

Clive Whitcher, Head of Inceptua Pharma, says:

“With the launch of Apealea in Germany, first relapse ovarian cancer patients now have a treatment option that provides a Cremophor-free formulation, reducing the need for mandatory premedication and offering a shorter infusion time.”

About Ovarian Cancer

Ovarian cancer is one of the most common female cancers affecting the primary reproductive organs.² Globally, it is the third most common cancer among women and has the highest mortality rate^{3,4}. Although ovarian cancer has a lower prevalence in comparison with breast cancer, it is three times more lethal, and it is predicted that, by the year 2040, the mortality rate of this cancer will rise significantly^{5,6}. About half of the women who are diagnosed with ovarian cancer are 63 years or older and many of these patients are predisposed to age-related comorbidities, such as diabetes, which can influence treatment response and prognosis⁷.

About Apealea® (paclitaxel micellar)

Apealea received marketing authorization by the European Commission in November 2018, making it Europe's first Cremophor-free formulation of paclitaxel approved in combination with carboplatin for use in first relapse ovarian cancer¹. Apealea is a patented, water-soluble, intravenously injectable formulation that can be given with reduced premedication such as steroids and with a shorter infusion time¹. In the pivotal trial OAS-07OVA, Apealea was shown to be non-inferior to Cremophor-based paclitaxel for Progression Free Survival (PFS) and Overall Survival⁸. An ad-hoc subgroup analysis suggests a significant benefit of Apealea for PFS in patients with first relapse but not in the small subpopulation with second relapse⁸.

About Inceptua Group

Inceptua Group is a specialty pharmaceutical company and global service partner. Inceptua Pharma commercializes and markets orphan and specialty care products and have the expertise and capabilities to supply unlicensed medicines globally. The service business units, Inceptua Clinical Trial Supply and Inceptua Early Access, support pharma and biotech companies with global clinical trial comparator sourcing, packaging, labelling, and distribution solutions and strategy, design and implementation of global early access programs (pre-approval, managed access, compassionate use). Inceptua partners with life science companies of all sizes, drawing on over 20 years of industry experience, and has global
