Automated Software Testing Services Provider DVT UK Hosts London Event at Level 39

Friday 23 March, 2018

LONDON, UK, 24th March 2018 - For many technology and software companies, especially those in the early stages of growth, product testing, quality, time to market, budget and resource constraints can make the process of shipping a working solution to customers a complex and difficult task. This issue is compounded when you are a high tech start up developing products in dynamic and competitive market such as FinTech, InsureTech and HealthTech. DVT UK based in London is a leading Automated Software Testing Services Provider with a special focus on Medium Sized Enterprises (SMEs) and recently ran a successful seminar at the Level 39 Tech Hub, Canary Wharf, London hosted by Bruce Zaayman, Director of Client Engagement who oversees DVT Testing Solutions in the UK.

Software Testing for Tech Disruptors - A new kind of model

Bruce Zaayman, who hosted the Level 39 Event outlined, “We see the software testing challenges faced by tech disruptors and large clients on a daily basis and they often face the same challenges. Smaller companies with tighter budgets need transient testing support while larger companies can “body shop” in testing resource. This is where a local, UK outsource software testing partner can play a big part in the success of the SME as we have a range of outsource models specially designed for this kind of need and market”.

Zaayman concluded, “We launched an outsourced software testing service designed for UK SMES, called the DVT GTC (Global Testing Centre) Lite Package which gives SMEs automation regression and performance testing at a more affordable price point, without compromising on service or quality. This includes a FREE Proof of Concept (POC) phase and dedicated testers for testing almost any app on any software platform using DVT’s expert testing framework. The POC runs for 2 weeks to demonstrate the value for the client investment which is an invaluable component to starting any new supplier relationship and one we believe is unique in the UK testing services market”.

Chris Wilkins Group CEO stated, “UK companies who are focusing on radically changing markets need to lower risk but not compromise on quality and so are seeking new testing partners and outsource options to suit changing circumstances, reduce costs, and improve efficiencies to become more competitive both locally and globally. This is why we offer local UK account management linked to our Global Testing Centre that can cater for all our client needs much more cost effectively.”

UK clients like our software testing outsource service model

Doddle is a team on a mission to transform package delivery services in the UK. They are disputing the way to get packages into peoples’ hands quickly, easily and reliably. Gary O’Connor, Doddle Chief Technology Officer, said: “We were introduced to DVT as a solutions provider who could help us to find a way to automate a lot of our software testing. They’ve provided very practical and efficient solutions, enabling us to focus on our customers”.

“We were challenged to find a way to overcome the physical scanning speed of Doddle’s Android-based parcel scanning device, which was too fast to allow testing scripts to run properly,” says Jacques Fouche, Director of Testing Services. “We’ve been able to develop a practical solution for regression testing and test automation service that met with Doddle’s high standards and requirements.

Fouche concluded, “Having our client managed locally in the UK while having the testing service provided by the GTC in South Africa allows our teams to regularly collaborate with one another in a similar time zone and rapidly develop trust from the onset. The client knows we are on hand to solve any issue and the feedback has been very positive.”

About DVT UK

DVT Group was founded in 1999 and offers high quality software testing outsource solutions and related software development professional services that deliver business value for clients faster. The DVT UK
