The research division of the [Fleet Asset Management Group](#) has reported a continuation of a slight recovery of the crypto market this Saturday. In fact, Bitcoin (BTC) was stable at approximately \$110,000. After a short-term drop last week, traders are slowly returning to the risk market, however, they still predominantly invest in the strongest assets.

Top Cryptos: Ethereum and XRP Leading the Pack

·Ethereum (ETH) had a 3.5% increase and closed at \$3,970;

·BNB and Solana (SOL) both increased approximately by 3% with SOL closing the day at \$200.29;·XRP was the most significant main asset that rose by 4.5%;

·Cardano (ADA) was still, and Tron (TRX) dropped by 5% thus becoming the most prominent of the majors.

After the 19 billion dollar liquidation event that caused a drop in risk appetite, traders are now very cautious and only move to tokens with clear catalysts which they take as a sign that market sentiment is gradually getting better, says the Fleet Asset Management Group.

Policy & Event Drivers: BNB Gets a New Life

The good vibe in the market for [Binance](#) was once again fueled when U.S. President Donald Trump totally pardoned its founder, Changpeng Zhao. This week, BNB was up by 5% or so, which a lot of traders see as the end of regulatory uncertainty that had been going on since late 2023.

David Namdar, CEO of CEA Industries, said: "Not only is the pardon of [Changpeng Zhao](#) a landmark for him as an individual, but also a very significant event for BNB and Binance. It is facilitating entry into the US market more deeply."

The Fleet Asset Management Group thinks that besides the celebration event for the BNB spirit, it might also indicate a regulator-friendly environment that is leading a broader move.

Solana: Risk Appetite Indicator

Solana(SOL) was 5% higher this week and thus it remained attractive for institutional inflows and consequently it strengthened its position as a liquidity gauge of market risk sentiment.The overall demand for altcoins is still very weak, however, Solana's excellent performance is a clear signal that investors choose high-efficiency, high-liquidity chains even if the future is uncertain.

Fleet Asset Management's Point of View

The research team of Fleet Asset Management Group has summarized its observation in three major points:

1. The stable consolidation of Bitcoin is serving as temporary support and a larger breakout will be dependent on improved macro liquidity.
2. The great performance of [BNB](#) and Solana is a signal that the money is flowing into assets that have real-life use cases and visible positive drivers.
3. In a volatile and uncertain market, the adoption of structured yield and risk management strategies involves less risk compared to pure speculation.

"Currently, data-driven and professionally managed strategies are significantly more efficient than emotionally-driven speculative activities. Fleet Asset Management Group is still very much aligned with this view and they are keen on providing leading insights and systematic investment solutions to facilitate

clients in navigating through the volatility with confidence." - Fleet Asset Management Research Team.

Fleet Mining: Structured Yield Platform Powered by AI

Beyond speculation, Fleet Asset Management Group's flagship platform leverages AI computing power to provide investors with stable and reliable cash flow. Its AI computing power scheduling engine is transforming how computing power is used, enabling investors to achieve stable returns even amidst market volatility.

- Intelligent scheduling: Artificial intelligence is always ready to check network node difficulty, energy costs, and market signals, so it can very quickly determine where to extract the greatest profit from computing power.
- Daily Settlements: The revenues are either in [USDT](#) or BTC during each 24 hrs period, and the recipient is free to either withdraw or reinvest;
- Green Energy Infrastructure: The nodes around the world that are situated in North America, Northern Europe, and Central Asia are powered by renewable energy and, hence, are compatible with ESG standards;
- Flexible Contracts: Their durations vary from 2 to 60 days so as to provide a wide range of possible investor goals.

Example Returns:

- \$1,200 / 10 days ? \$16.20/day ? Total \$1,362
- \$30,000 / 45 days ? \$540/day ? Total \$54,300
- \$100,000 / 50 days ? \$1,850/day ? Total \$192,500

Conclusion

The return of BNB and [Solana](#) is a very obvious signal that the market was once again very much focused on policy changes and high-quality assets. Nevertheless, investors who operate in a volatile and uncertain environment are getting more and more dependent on those instruments that can provide stable, transparent, and sustainable cash flow.

AI computing power is one of those instruments — thus making it possible for investors to go beyond mere speculation and achieve long-term, stable growth through AI and the hashrate economy.
