LONDON, UNITED KINGDOM – BLACKSTRYKE, the British defence group driving sovereign manufacturing renewal and supply-chain resilience across allied frameworks, has launched its '*Sovereign Energetics Programme'* – an advanced initiative through which it will manufacture and supply critical energetics, propellants and munitions inputs; rebuilding strategic production capacity and ensuring reliable delivery for allied governments and leading defence primes.

The initiative defines a new model for allied industrial resilience – a sovereign energetics production architecture capable of sustaining deterrence under modern operational and supply-chain pressures. Designed around sovereign autonomy, interoperability and survivability, and enhanced through the use of artificial intelligence and automation, it establishes BLACKSTRYKE as a next-generation defence manufacturer for the *NATO* sphere and its partners – integrating engineering, production and sovereign supply under one aligned structure.

The group's forthcoming New York City office, scheduled to open in early 2026, will serve as BLACKSTRYKE's North American base for investor engagement, programme coordination and strategic liaison within the allied defence ecosystem.

"Our Sovereign Energetics Programme represents a decisive step in rebuilding industrial sovereignty within the allied defence architecture," said a group spokesperson. *"It ensures that allied nations retain independent access to energetics at scale – produced through resilient systems engineered and governed from the United Kingdom and deployed where operationally required."*

The company confirmed that the programme is advancing with sovereign-capital and institutional investors aligned to national-security mandates, with manufacturing preparation and partner alignment now progressing alongside strategic engagement with allied government and prime-contract customers.

BLACKSTRYKE is also pioneering proprietary manufacturing architectures designed to redefine how allied nations produce energetics in the field – with additional announcements to follow.

The *Sovereign Energetics Programme* forms part of BLACKSTRYKE's long-range agenda to position the United Kingdom as a central node within the allied energetics and munitions ecosystem – reinforcing British defence-industrial sovereignty, accelerating capability renewal and underpinning deterrence across the collective defence landscape.
