

# BP Makes Second Significant Gas Discovery in Egypt's East Mediterranean Sea

Monday 9 March, 2015

BP Egypt announced today another important gas discovery in the North Damietta Offshore Concession in the East Nile Delta. The "Atoll-1" deepwater exploration well, currently being drilled using the 6th generation semi-submersible rig "Maersk Discoverer," has reached 6,400 metres depth and penetrated approximately 50 metres of gas pay in high quality Oligocene sandstones. Expected to be the deepest well ever drilled in Egypt, the Atoll well still has another 1 kilometre to drill to test the same reservoir section found to be gas bearing in BP's significant 2013 Salamat discovery, 15 kilometres to the south.

Bob Dudley, BP Group Chief Executive, commented: "Success in Atoll further increases our confidence in the quality of the Nile Delta as a world class gas basin. This is the second significant discovery in the licence after Salamat. The estimated potential in the concession exceeds 5 trillion cubic feet (tcf) and we now have a positive starting point for the next possible major project in Egypt after BP's West Nile Delta project."

Commenting on the discovery, Hesham Mekawi, BP North Africa Regional President said: "The Atoll discovery is a great outcome for our second well in this core exploration programme in the East Nile Delta. It demonstrates BP's continuous efforts to help in meeting Egypt's energy demands by exploring the potential in the offshore Nile Delta. We are proud of our commitment to unlock Egypt's exploration potential that requires large investments to utilise using the latest drilling and seismic technologies."

Atoll-1 was drilled in 923m water depth around 80km north of Damietta city, 15km north of Salamat and only 45 km to the north west of Temsah offshore facilities. BP has 100% equity in the discovery.

#### **Notes to Editors**

- BP has a long and successful track record in Egypt stretching back 50 years with investments exceeding \$25 billion, making BP one of the largest foreign investors in the country. In Egypt, BP's business is primarily in oil and gas exploration and production.
- To date, BP Egypt, in collaboration with the Gulf of Suez Petroleum Company (GUPCO), BP's joint venture (JV) Company with the Egyptian General Petroleum Company (EGPC), has produced almost 40% of Egypt's entire oil production, and currently produces almost 10% of Egypt's annual oil and condensate production.
- In addition, through BP's JVs with EGPC/EGAS and IEOC (ENI), the Pharaonic Petroleum Company (PhPC) and Petrobel currently produce close to 30% of Egypt's total gas production.
- BP is working to meet Egypt's domestic market growth by actively exploring in the Nile Delta and investing to add production from existing discoveries.
- The West Nile Delta (WND) Major Project is a strategic project for BP and its partner and is also critical to Egypt as it will provide more than one billion cubic feet per day (25% of Egypt's current production) of gas.
- BP is a 33% shareholder of an NGL plant extracting LPG and propane, United Gas Derivatives Company (UGDC) in partnership with ENI/IEOC and GASCO (the Egyptian midstream gas distribution company).
- BP is also present in the downstream sector through Natural Gas Vehicles Company (NGVC, BP 40%) which was established in September 1995 as the first company in Africa and the Middle East to commercialize natural gas as an alternative fuel for vehicles.

#### Cautionary statement:

This press release contains certain forward-looking statements concerning BP's expectations regarding BP Egypt's second gas discovery in Egypt's East Mediterranean Sea, including expectations regarding the final depth of the "Atoll-1" well; the estimated quantum of barrels in the concession and prospects for a future major project; prospects for future exploration and investment in Egypt; and the estimated daily production of the West Nile Delta Major Project. Actual results may differ from those expressed in such statements, depending on a variety of factors including changes in public expectations and other changes to business conditions; the timing, quantum and nature of divestments; the receipt of relevant third-party and/or regulatory approvals; future levels of industry product supply; demand and pricing; OPEC quota restrictions; PSA effects; operational problems; regulatory or legal actions; economic and financial conditions generally or in various countries and regions; political stability and economic growth in relevant areas of the world; changes in laws and governmental regulations; exchange rate fluctuations;
