

BTCNEXT Foundation Hong Kong improves trading tools to increase attractiveness

Thursday 16 December, 2021

BTCNEXT Foundation Hong Kong has doubled its CEX's users during 2021, just by introducing new trading tools. This applies both to instruments and new pairs.

BTCNEXT Foundation Hong Kong continues to pursue its original goal for the cryptocurrency exchange [BTCNEXT](#) - global popularity. To achieve this, the team is following a clear plan that includes several layers. In addition to the listing of new coins, traders should get a better user experience. Therefore, the trading functionality is extremely important. BTCNEXT Foundation Hong Kong spared no effort and implemented professional-grade tools.

Dynamic layout

Dynamic layout in the Trading UI allows the organizing of order book blocks, watchlists, charts and history of trades in a convenient way. Users also have the ability to change the size and order of these windows without any limitations.

Workspaces

This option provides the creation of several Workspaces for different trading purposes. It's a needed step toward meeting professional traders' demands.

Market Depth

This tool provides the opportunity to monitor the ability of the market to sustain relatively large orders without impacting the price of the asset.

Grouping of volumes

This helps to analyze the deepest liquidity available on the BTCNEXT platform. It can be accessed in the order book of every instrument.

Watchlist

This widget can boost up the Workspaces of the Trading UI. Users can add to a wishlist of pairs, see the current prices, volumes, as well as 24-hour highs & lows in one place.

Block of Deposits & Withdrawals

This block has been renovated. The methods have become more individual and clear. The team added a new form for credit & debit cards, making fiat deposits.

Withdrawal address whitelist

The platform strives to reach the highest level of security for users' funds. That's why the withdrawal address whitelist was released. The chance to make cryptocurrency withdrawals is only available to addresses that have been whitelisted by the user. Whitelist management is only permitted for 2FA users.

The implementation of the described technical solutions have made it easier to attract professional traders to the exchange who were looking for new platforms with maximum capabilities. However, the team isn't done making improvements.

BTCNEXT Foundation Hong Kong has listed 13 new coins on [BTCNEXT](#) in 2021 alone. This brings a massive inflow of trading opportunities. The advantages users get with these new coins:

- diversifying portfolios
- trying out new trading tools
- utilizing more trading opportunities
