Orange study – Future of Digital Trust – finds consumers place an approximate value of €170 / £140 on their personal data to businesses. Consumers happier to share information, at less value, with businesses they trust or have a relationship with. Consumers' heightened awareness and understanding of the value of their data to businesses is a trend that companies must take note of. Orange today releases the second stage in its research into consumer attitudes relating to how businesses use their personal data.

The research found that consumers consider the cumulative value of a common set of their personal data to be worth approximately €170/£140, a figure businesses need to bear in mind when balancing the use of personal data and supplying services in return. However, consumers place a higher value on their data when sharing it with a company they are unfamiliar with – rising to nearly €240/£200 for the full set of data commonly shared online.

On average, consumers attribute a value of approximately €15/£13 to an individual piece of data that they are willing to share with a brand they already know. However, the value of data increases by 20 percent to approximately €19/£15 for organisations they have not dealt with previously, demonstrating the importance of fostering trust for brands through transparency about how the information is being used, and what benefit the consumer is receiving by sharing it.

other key findings included:

- **Four in five (80 percent) respondents know that their personal data has a value** for companies, with a further 78 percent agreeing that this value increases the closer they match a brand's ideal customer demographic.
- **67 percent of respondents believe organisations benefit the most from the sharing of data**, and just 6 percent believing the consumer benefits the most – illustrating a pronounced sense of imbalance in the data-sharing relationship between consumers and businesses.
- **77 percent of consumers stated that it is 'very important' or 'critical' for mobile operators to inform them about how their data is being used** - nearly as important as providing them with reliable service and value for money.

“The research clearly demonstrates that consumers are acutely aware that the information a company holds about them has a value to that brand,” says Daniel Gurrola, Vice President, Business Vision, Orange. “As the perceived value that consumers place on their data can change, depending on the relationship they hold with the organisation, companies must consider not only how they convey what the customer gets in return for this data exchange, but precisely how the data is being used, and where in order to build that essential trust.”

This report is part two of research conducted late 2013 and early 2014. The executive summary and an overview of the results of this report and the previous Future of Digital Trust report can be downloaded at www.orange.com/digitaltrust

[the future of digital trust: a European study on the nature of consumer trust and personal data](#) about the Orange Data Privacy Charter

Orange aims to be recognised by its customers, users and partners as their “trusted operator”. To that end the Group has made clear and solid commitments to protecting personal data and respecting our customers' privacy.

On 7th November, at the Hello 2013 Show, Stéphane Richard officially signed a charter comprising 4 commitments to protecting our customers' personal data and privacy:

- security of customers' personal data through its reliable processing and secure storage
- control for customers over their own personal data and how it is used, including a personal dashboard
- transparency in terms of the handling of data for its customers and users at all stages throughout our relationship
- support for all its customers and users to help them protect their privacy and manage their personal data better
