For the last two years a central point of discussion for "cryptocurrencies 2.0", the successors to Bitcoin, has been Smart Contracts (or as we call them Automated Transactions). However, implementation of this highly advanced technology has been a rare, but virtually unique exception is cryptocurrency BURST (Burstcoin) with its breakthrough research and technological innovation.

In the previous BURST press releases, we firstly described the inclusion of Smart Contracts/Automated Transactions in the core code of the currency (2014-12-23) and, secondly, an actual implementation of the revolutionary technology (2015-01-25), in the form of a totally decentralized lottery called LuckyAT. It was stated that the seemingly simplistic lottery would lay ground for further, more complex Smart Contracts/Automated Transactions. In a third press release (2015-02-15) a new and more sophisticated case was as promised announced, when BURST's developers was able to implement CIYAM's crowdfunding innovation.

In a way, we are only at the beginning of a journey that will transform the ways we think of Internet. After those press releases, we are now proud to announce the BURST MARKET explorer. You will find it here: <http://burstcoin.info/market/>, an easy way to see all items available on the BURST MARKET (a few items are already for sale). As the supply and range of products will increase, there is already a tool to search for items of interest.

More importantly, sa BURST can offer a free marketplace without fees, no taxes and no central authority setting the rules, the reasons to use a centralized marketplace such as eBay are less. In addition, further research is pursued, which will make BURST MARKET even more attractive, creating one huge market for AT implemented coins.

BURST MARKET is already live.

Please find more details in the press release below, as well as our contact details:
