CryptoPing Bot Assists Users in Making Profitable Trades on Turbulent Cryptocurrency Markets

Sunday 31 December, 2017

CryptoPing is a service that monitors crypto markets and notifies users whenever a crypto asset gets an unusual amount of market action. After a successful fundraiser of 1,000 BTC in 2017, the CryptoPing bot has been alerting traders daily on profitable market opportunities to seize. Users can now benefit from a free subscription promotion for 3 months.

A Volatile and Increasingly-Complex Market

There are today over 1,300 different cryptocurrencies in circulation, modeled after Bitcoin with varying degrees of similarity to the original concept. So far, cryptocurrency creation isn't showing any sign of slow down. In this vibrant and fast-paced market, it is becoming increasingly difficult to keep track of the numerous daily events and developments.

Traders pour large amounts of time and effort and time into interpreting charts, reading forums and social media feeds, and gathering information about coins in attempts to predict market trends.

But crypto markets are volatile, making the task even harder. Shilling and other forms of disinformation (like spreading FUD — fear, uncertainty, disorder), or even just false promises from coin developers quite often stop traders on their quest for profit.

It's impossible to factor in all the trends, events and subtleties that shape markets. Making a good trade can be difficult even for experienced traders, let alone newcomers. This is where CryptoPing can of an invaluable help.

How to Make Profitable Cryptocurrency Trades

CryptoPing scans the millions of trades made on cryptocurrency exchanges. When its algorithm detects an unusual change in the market, it instantly alerts the user.

CryptoPing's watching algorithm has been already thoroughly tested and its performance verified in practice. There are numerous cases when it sent signals right before a coin pump or even long before that.

Once the user receives a ping on a given coin, he can conduct his due diligence, and take a decision regarding the trading opportunity.

The CrytoPing signaling bot comes with a list of features that allows traders to see more clearly in the increasingly-complex cryptocurrency markets. Users can select the exchanges to get signals from, customize the frequency of generated pings, filter assets by specific attributes, and signal analytics with charts in a dashboard.

A High-Performing Trading Assistant

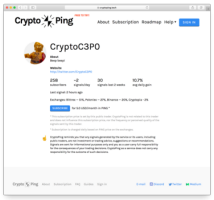

Since its launch in February 2017, CryptoPing has been growing its user base and is now frequently used by more than 80,000 traders worldwide, who receive signals on crypto assets via a Telegram bot.

These signals come from five different exchanges: Bittrex, Poloniex, HitBTC, YoBit and Cryptopia. The next in the list of exchanges to be added are Bitfinex, Binance, Tidex.

As of today, CryptoPing has processed over 320,000,000 trading events and generated more than 21,000 signals about crypto assets that were getting unusual amount of market action.

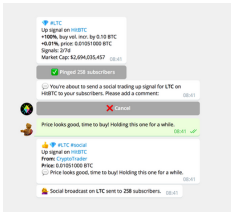

The estimated daily profit out of these signals is 21.07%. You can sign up and give it a try right now.
