Cybersecurity specialist Threat Protect is now working with Osirium to provide an industry leading product suite that protects critical data from cyber-attacks and internal threats

Tuesday 4 September, 2018

London, UK, 04/09/2018: Threat Protect has today announced a new partnership with Osirium Technologies plc (AIM: OSI.L), a leading cyber-security Privileged Access Management (PAM) vendor. This new partnership brings Osirium's PAM solution, the PxM Platform, neatly in to Threat Protect's Partner Ecosystem.

Osirium has defined and delivered a next generation PAM solution, giving businesses the opportunity to control and manage privileged users across an entire organisation. Its unique Privileged Task Management module automates repetitive tasks associated with Privileged Accounts, such as Help Desk activities, enabling customers to increase business efficiency and time saving.

"We are excited to add the Osirium PxM Platform to our partner ecosystem," said Jonil Patel, Chief Information Security Officer at Threat Protect. "It strengthens our services and furthers our commitment in providing robust technology solutions to our clients. One of our core strengths is ensuring all clients have access to the latest technological advances at a competitive price. Osirium adds further capabilities to our portfolio, taking Privileged Access Management to the next level. One of our favourite modules now available is Privileged Behaviour Management."

The PBM module brings the auditing capabilities of the PxM platform in to the here and now. Using machine learning techniques, the PxM platform identifies anomalous behaviour in real time, reducing the window of risk from potential misuse of privileged account credentials.

Tim Ager, Sales Director at Osirium, adds, "Working with Threat Protect further extends the awareness and benefits of Osirium's PAM solution. This partnership also enables Osirium to benefit from Threat Protect's knowledge in providing outstanding cyber-security services; it's a strong fit for both organisations in a competitive market place."

About Osirium.

Osirium Technologies plc (AIM: OSI.L) operates in one of the fastest growing parts of the cyber-security market and is a leading vendor of Privileged Access Management ("PAM") software. Osirium's cloud-based products protect critical IT assets, infrastructure and devices by preventing targeted cyber-attacks from directly accessing Privileged Accounts, removing unnecessary access and powers of Privileged Account users, deterring legitimate Privileged Account users from abusing their roles and containing the effects of a breach if one does happen.

Osirium has defined and delivered what the Directors view as the next generation PAM solution. The team has developed the concept of Virtual Air Gap to separate users from passwords, with Osirium's Privileged Task Management module which is built on Robotic Automation technology and further strengthens Privileged Account security by minimising the cyber-attack surface and delivering impressive return on investment benefits for customers.

Founded in 2008 and with its headquarters in Reading, UK, the Group was admitted to AIM in April 2016. For further information please visit www.osirium.com
