

Databahn.ai Introduces 'Data Reef' - An AI Insight Layer Powered by Its Own MCP Server for Smarter Security Data Context

Monday 28 April, 2025

"New AI-Powered Insight Layer Transforms Raw Security Telemetry into Real-Time, Contextual Intelligence - Ushering in the Era of the Security Data Reef, Powered by MCP and Cruz"

Dallas, TX, USA - April 28, 2025 - Databahn.ai, a leader in AI-powered data fabric and pipeline management, today announced the launch of Data Reef, an industry-first solution that transforms high-volume, high-velocity security telemetry into actionable intelligence - precisely when and where it's needed.

Enterprises collect petabytes of logs, alerts, and telemetry - but typically analyze less than 5% of it. That small slice often contains the most critical signals. Reef intelligently filters, contextualizes, and prioritizes this high-value data in real time, writing it directly to enterprise-owned data lakes infrastructure.

The result: meaningful insights delivered instantly to security analysts and decision-makers.

"Security teams don't need more dashboards - they need answers, they need insights" said **Mihir Nair**, Head of Architecture & Innovation at Databahn.ai. "We've harnessed GenAI to reimagine how teams interact with data - delivering relevant intelligence the moment it's needed. Our new Model Context Protocol (MCP) Server advances this vision even further. It helps to seamlessly integrate Reef with Cruz AI -Databahn.ai's Data Engineer. With a single prompt, users can uncover configurations, inventories, and anomalies - driving faster, smarter decisions."

Built on Databahn.ai's modular **Security Data Fabric**, Reef unifies telemetry from all sources into a centralized, searchable metadata layer accessible via natural language. This makes security data not only usable - but useful - for SOC analysts, threat hunters, infrastructure teams, auditors, and even AI systems.

"Unlike lakes or swamps - passive metaphors for storage - **Reef is where the signal lives,**" added **Nithya Nareshkumar**, Co-Founder and President of Databahn.ai. "It's where your logs stop sitting idle and start telling a story."

With **Reef**, Databahn.ai reinforces its commitment to delivering cutting-edge AI solutions that simplify and scale security data operations. The product is available immediately to existing **Security Data Fabric** customers and as an insight-layer add-on for enterprises aiming to optimize observability, reduce cost, and enhance security outcomes with AI.
