

Dedalus Skydiving is introducing the first mobile hybrid vertical wind tunnel in the world

Tuesday 1 July, 2014

The first mobile hybrid vertical wind tunnel in the world, is now available in the U.K. and the rest of Europe.

We are taking indoor skydiving to the next level by increasing accessibility to the dream of bodyflying in any location that you wish and providing bespoke services ranging from recreational, leisure and sports to corporate, government and military.

Every year people of all ages and professions venture forth into the exciting world of indoor skydiving. Many embrace it as their favorite sport and go on to learn advanced bodyflight skills, while for others it is simply a must have once in a lifetime experience.

It is a fact that bodyflying in a vertical wind tunnel is internationally evolving into a fun sport and unique entertainment experience. Our brand will take most advantage of the positive differences that our mobile hybrid vertical wind tunnel has in comparison to the stationary wind tunnels.

We aim in the following years, to make the easiness of use and accessibility of our mobile hybrid vertical wind tunnel readily available to everyone, thus contributing to the progression of the skydiving sport worldwide.
