Delivery Mates partners with Citkar to introduce their Loadster Electric Cargo Quadcycles to the UK

Wednesday 22 September, 2021

(London, 22 September 2021) Delivery Mates, the final mile logistics provider offering on-demand carbon-free transportation and inner-city solutions, today announces a partnership with Citkar, the Berlin-based mobility company, to introduce the Loadster quadricycle to the UK.

The Loadster
is a mobility vehicle that combines the ease-of-use of an electric bike with the functionality of a minivan. To use the Loadster, the driver only needs to engage the pedals to set the electric system in motion. Because of this pedal-assist principle and a top speed of 25 kph, the Loadster classifies as a bicycle and does not require a driver's license, broadening the range of its users.

It has a built-in cabin that protects the driver from wind and the weather while they leave behind traffic jams in large cities. An ideal solution for same-day delivery businesses, the Loadster can be driven in parks and on bicycle lanes. The Loadster can carry up to 235 kilograms and has multiple volume load options of up to 1550 litres. It is powered by a 1,500 Wh battery that can cover around 50-60 kilometres, making the vehicle environmentally friendly.[1]

Citkar is a German mobility solution provider with a mission to improve urban transportability. Their vehicles are registering success in collaboration with more than 30 premium partners throughout Europe. Delivery Mates is the first logistics provider to bring this pedelec solution to the UK and enable their 360-degree proposition: supplying delivery drivers, vehicles, delivery management software, along with service and maintenance for the complete final mile solution.

Ercilio Oliveira, Head of Operations, Delivery Mates, comments:

"We are delighted to partner with Citkar, as they are one of the EU-approved partners in this market in terms of Safety and Security. We believe this partnership will provide a significant per ton cost advantage to our customers as compared to other players in the market, together with revolutionary cost subsidies that showcase our offering as a cost and time-efficient transport solution. Combined with our delivery management software offering, we are best-placed to enable businesses to reach more customers and gain market share."
