

## Dubai based Start up Launches ICO to Develop Applications based on Blockchain Technology

Monday 10 July, 2017

**The Royal Kingdom Enterprise presents projects founded on Crypto's billionaire market economy by providing participation in the results.**

Since Blockchain technology has become the holy grail of the technology sector and its implementation possibilities have influenced the development of solutions in diverse industries, the company has initiated the process of creating projects to accompany this trend.

Today, July 10, 2017, the Royal Kingdom Enterprise presents the opportunity to participate in this development through its ICO.

Aligned with the view of the Dubai Government of having its services and documents registered in blockchain up to 2020, the Royal Kingdom Enterprise invites to the opportunity to bridge the potential of the technology blockchain the needs of people and public or private enterprises.

To develop products and services that aggregate value to society in a sustainable way, the Royal Kingdom Enterprise decided to seek funding through crowdfunding, developing its own token (Royal Kingdom coin-RKC), a ERC20 at the top of the blockchain of the Ethereum platform.

The issuance of the RKC token aims at the voluntary participation of network users to promote projects proposed by the company. In this way we invite everyone to know our projects and align themselves with the same goal through the involvement of the ICO of the [Royal Kingdom coin](#).

The total quantity of RKC will be in the limited number of 15 million (15 million) in total (including those available for sale during ICO 2,700,000). Your issuance will be unique and it will not be possible to generate new RKC tokens, because they will be configured on the smart contract. In the medium and long term, the Royal Kingdom coin will show itself as a reflection of the organization's positive performance, obtaining its own market value, being regarded as a consumable virtual product.

The initial value of each token will be \$0.10, and this price will increase proportionately according to the volume of its acquisition by the market. The RKC token can be acquired from the [Venture Kingdom](#) platform, you must register and enter balance in bitcoin or ether to be prepared for the opening of the ICO.

Contributing to the ICO of Royal Kingdom coin, through the acquisition of RKC, grants benefits to the coin carriers. Among them we would like to highlight that the Royal Kingdom Enterprise from February 2018 will share with the participants the monthly earnings acquired.

Monthly will be allocated 50% of the company's profits to purchase the RKC token on the market, and these will be distributed proportionately to the carriers of the RKC according to the amount of coins they possess in their wallets rkc.

ICO participants invest in the success of the Royal Kingdom enterprise projects and can help to disclose the sale of RKC tokens to increase awareness in the general community, enabling the anticipated liquidity of RKC tokens through our reward campaign.

The ICO is a transformative step for the development of the projects of the Royal Kingdom Enterprise, as it makes it possible through the community's participation to construct ideas and share the results.

To understand the project in full we offer the whitepaper, on the official page of the ICO of the Royal Kingdom coin. Be part of this construction and come with us!
