

EasyArbit Raises €7 Million in Seed Funding to Transform Arbitration Administration with AI

Monday 29 September, 2025

EasyArbit, an emerging leader in legal technology, today announced the successful closing of a €7 million seed funding round. This milestone investment will enable EasyArbit to accelerate the development and deployment of its AI-powered platform, designed to revolutionise how arbitration secretaries, tribunals and institutions manage the administrative backbone of complex cases.

The seed round attracted a consortium of prominent venture capital firms and strategic investors from across Europe and beyond, reflecting the growing demand for innovation in the arbitration sector. The newly secured capital will be channelled into expanding EasyArbit's engineering and customer success teams, advancing product development and supporting early adopter partnerships as the company readies for its public launch.

EasyArbit's platform is engineered to automate and orchestrate the most time-consuming aspects of arbitration administration. By leveraging advanced artificial intelligence, EasyArbit enables secretaries and case managers to handle scheduling, document management, deadline tracking and secure communications with unprecedented ease and accuracy. The solution is designed to integrate seamlessly with widely used productivity tools such as Microsoft Teams and Outlook, ensuring that users can work within familiar environments while benefiting from powerful automation.

The startup's primary goal is to provide a platform that operates quietly in the background, making administration effortless, reliable and secure. With this investment, EasyArbit is poised to deliver a solution that empowers secretaries and institutions to focus on what truly matters: the integrity and success of every case.

As it moves forward, the company will focus on expanding its team in Brussels and across Europe, deepening integrations with leading productivity and document management platforms and working closely with early adopters to refine the user experience. Security, compliance and user-centric design remain at the core of EasyArbit's development philosophy, as the company prepares to set a new standard for arbitration administration.
