EDNX Wireless engineers prove their outstanding capabilities of site surveying by achieving ECSE accreditation from Ekahau

Tuesday 10 September, 2019

EDNX engineers have vast experience in performing wireless surveys in a variety of industries including healthcare, manufacturing, education and finance. Although they have many years of experience in designing, optimizing and troubleshooting wireless networks, they continue to learn and acquire new skills. Earlier this month all EDNX wireless specialists achieved the prestigious ECSE accreditation from Ekahau
proving their exceptional technical ability.

At EDNX they pride themselves on being an elite networking consultancy that delivers wireless projects in the most efficient and cost-effective manner. They use the latest innovations in technology from Ekahau to carry out wi-fi measurements and computation. This allows them to provide in-depth reporting of wireless environments including spectrum analysis to detect interference and packet capture for troubleshooting. At the end of the process they deliver detailed reports to their customers that becomes the foundation for a wireless LAN design.

All engineers and architects from EDNX fully understand the importance of well executed wireless site surveys
because getting the fundamentals right is critical in RF environments. They believe that businesses can't neglect the fundamental physics behind the technology. It becomes even more important with wireless first
strategies that many companies have embraced in recent months.

The revolution in technology standards including Wi-Fi 6 means that many companies are looking for a trusted partner to install or upgrade their WLAN. It is no longer enough to use wi-fi as a backup connectivity method or just dedicate it for guest access. More and more businesses adopt wireless first strategies and require resilient, optimized and high-performance network. Choosing EDNX as a partner means they get a fully accredited team of engineers that are among the best in the industry.
