Let's explore the advantages of these innovative sleep solutions and how they can elevate your nightly rest.

1 - Personalised Comfort: One of the primary advantages of adjustable beds is their ability to customise your sleep position. Whether you prefer to sleep with your head elevated, your legs raised, or both, adjustable beds allow you to find the perfect position for optimal comfort. Our adjustable bed bases offer a range of customisable features allowing you to tailor your sleep experience to your unique preferences.

2 - Enhanced Support: Adjustable beds provide targeted support to different areas of your body, helping to alleviate pressure points and promote proper alignment. By adjusting the angle of the bed, you can relieve strain on your back, hips, and joints, reducing discomfort and improving overall sleep quality. Our Ergobed-633 and Ergobed-450 adjustable bed bases feature Zero Gravity technology, inspired by NASA engineering, which elevates your body to a state of weightlessness, relieving pressure on your joints and promoting deeper relaxation.

3 - Alleviation of Sleep Apnea and Snoring: For those who suffer from sleep apnea or snoring, adjustable beds can offer relief by allowing you to elevate your head and upper body. This slight elevation can help keep your airways open, reducing the frequency and severity of sleep disturbances. Our Ergobed-633 and Ergobed-450 adjustable bed bases feature an Anti-Snore preset mode, which tilts the head position to minimize snoring and promote uninterrupted sleep.

4 - Improved Circulation: Elevating your legs while you sleep can help improve blood circulation, reducing swelling and discomfort in your lower extremities. Adjustable bed allow you to raise your legs to the desired height, promoting healthy circulation and reducing the risk of varicose veins and other circulatory issues.

5 - Versatility: Adjustable beds offer versatility beyond traditional flat mattresses. In addition to providing customized sleep positions, adjustable beds can also be used for reading, watching TV, or working from the comfort of your bed.
