

Fab Tracker by MODS: Efficiency-Enhancing Fabrication Oversight Tool Solves the Most Pressing Fab Yard Challenges

Tuesday 15 July, 2025

Fab Tracker, developed by MODS (provider of intelligent industrial software solutions), is a streamlined fabrication tracking solution created in response to a clear industry need for simpler, smarter, more accessible progress tracking and reporting tools.

Fab Tracker offers a lighter, mobile-first alternative to the MODS Connect Fabrication module. It is specifically for fabrication yards seeking to easily enhance progress tracking and reporting efficiency without any additional software tools or IT infrastructure.

Fab Tracker was designed for teams who need real-time visibility of the fabrication process, reduced administration and manual reporting, as well as easy access to reliable progress data. Informed by feedback from fabrication professionals, Fab Tracker addresses a real industry need to cut out wasted time and resource. The tool provides immediate value in fab yards, eliminating administrative bottlenecks while improving productivity, scheduling and information quality assurance.

One of MODS's global clients and an early proponent of Fab Tracker said:

"[Fab Tracker] is a real-time display of credibility... The ease of access to see a percentage of where your project is in fabrication is unbeatable. It's going to revolutionize the way we have been doing reports for clients and for personal use."

Fab Tracker's core capabilities include:

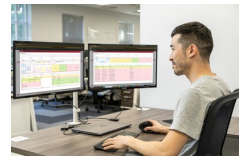

- Automated digital dossiers that eliminate time spent compiling documentation.
- Mobile-enabled QR scanning for real-time component traceability, reducing reliance on paper and desktop-based tracking.
- Cloud-based access from any location, providing full visibility to all stakeholders.
- Progress tracking with digital markup tools to improve quality of information at every fabrication stage.
- Built-in automated reporting to streamline communication and reduce administrative overhead.

Fab Tracker enables fabrication yards to improve cost control, scheduling accuracy and team collaboration — improving reliability of service and client-contractor relationships for industrial projects in the energy sector and beyond.
