FM and asset management visualisation software sees Altuity ranked in #PropTech50

Thursday 12 August, 2021

Altuity Solutions Ltd, an award-winning UK-based developer of facilities management (FM) and underground asset and buried utility services management software, has been included in Business Cloud's inaugural **#PropTech50 innovation ranking**.

Readers of Business Cloud, an online technology publication, an independent judging panel and Unissu's UniScore PropTech data platform together decided the 50 companies introducing or using innovative technology for real estate, construction, the built environment and building management.

Jonathan Symcox, Business Cloud's editor, commented:

> "Altuity is an example of a software company creating solutions which can be embraced by people without a background in technology.
>
> We were impressed by the focus on the use of 2D and 3D visualization technologies for uniquely managing buildings, estates and underground buried services.
>
> The PropTech 50 recognises companies of all sizes who are blazing a trail in real estate and construction – and it's a privilege to see Altuity make the final ranking for 2021."

Steve Voller, Altuity's Founder, added:

> "The PropTech50 innovation ranking for Altuity is another industry recognition of the benefits our visualisation technology bring to professionals working in FM and asset management.
>
> Mapping data such as assets and jobs onto maps, site and floor plans, in 360-degree images or 3D models helps people get a much better insight into the data they're managing. This helps those responsible for managing buildings and estates as well as making the invisible visible for utility and asset managers maintaining or laying buried utility services. We're helping to create safe and well maintained built environments for all of us.
>
> I'd like to thank Business Cloud for organising this PropTech innovation listing, to our customers and partners who voted for us and the judges."

Altuity's visually based software provides users with a choice of managing data on maps, floor and site plans, 360-degree photospheres and 3D scanned models. This makes the software simple and easy to use for everyone and provides quicker and more intuitive insights into data.

ENDS

About Altuity

Altuity was founded in 2014 to make it easier for those managing buildings, estates, assets and buried services to access information and gain insights from the data being managed. With its intuitive software, using advanced visualisation technology that combines maps, floor and site plans, 360° photospheres and augmented reality, Altuity delivers asset management solutions and a truly unique approach to managing data and information, to clients around the world.
