Gift: Dual Baby Monitor for Two Royal Babies

Thursday 23 April, 2015

The predecessor of this Baby Monitor from amplicomms was presented to the Royal Couple as a gift upon the birth of Prince George in 2013 by Action on Hearing Loss (formerly RNID). However, this latest version, the V132 will enable a camera monitor for each of the baby's beds.

This two-way audio visual monitor with a Vibrating Pillow Pad was specially developed for Parents/Carers with Hearing Loss.

The amplicomms Watch & Care V132 secured system comes with the option of a powerful vibrating pad, which can be placed under a pillow/mattress and vibrates when sounds are transmitted. This is an ideal solution for a house with two babies or perhaps one, and an elderly relative, with two-way communication so you can speak to one another.

The viewing unit has a belt clip and features built-in vibration alert, useful during the day for those with hearing loss.

Ran Meyrav, amplicomms European Director, says: "This digital monitoring system has been specifically designed to meet the needs of people who are deaf or hard of hearing with its vibrating alert and optional vibrating pad. Nobody wants to compromise on safety or security in the home so this system offers a much needed solution for families and carers."

Watch & Care V132 with two cameras and vibrating pad retails at £179.99
