Have you ever considered using Ozone as a room disinfection and sanitisation system? If not, now is the time to start considering it.

Wednesday 9 June, 2021

Are you looking for an effective office disinfectant and air purification solution? Are you looking for the most cost-effective solution without compromising on safety? Have you heard about the Viro Cube II?

You can count on Viro Cube II by Shorrock Trichem for all your sanitation and cleaning needs, especially in the wake of Covid 19.

Brought to the market in 2020, this portable ozone room disinfectant and sanitiser became an immediate success in a variety of industries, assisting the return to normal business.

Viro Cube II sanitises any surface quickly, killing bacteria and viruses, and eliminating bad smells. The ozone gas generator purifies the air, removing any unpleasant odours, and releasing fresh oxygen in its place.

Viro Cube II safely and efficiently:

• Purifies the air.

• Sanitises any surface.

• Eliminates bad smells.

• Kills over 99% of bacteria, mould, fungi, yeasts, pollen, and mites.

During use, ozone (O3) fuses itself with the nucleic core of viruses, disrupting the DNA and efficiently neutralising the virus. Ozone has been proven to eliminate the risk of bacteria, mould, pollen, and more.

When its job is done, the ozone gas reverts to its oxygen (O2) state, leaving your office space or business with clean, fresh air, leaving no chemicals or residues behind.

Trusted by colleges, care homes, sports clubs, hospitality, and more, the Viro Cube II stops airborne viruses from spreading effectively. By disinfecting your workplace and sanitising the air, you are ensuring the total care and safety of your customers and employees.

Recent Japanese research has found that low concentrations of ozone can neutralise coronavirus particles, potentially providing a way for hospitals to disinfect examination rooms and waiting areas.

Scientists at Fujita Health University told a news conference they had proven that ozone gas in concentrations of 0.05 to 0.1 parts per million (ppm), levels considered harmless to humans, could kill coronavirus.

The easy-to-use and portable Viro Cube II is suitable for large or small environments. With multiple settings to suit your needs, the Viro Cube II can also be used to assist in the treatment of hay fever and other airborne allergies.

When considering office and business sanitation, choose Viro Cube II for a quality product at an affordable price.
