HPS to Showcase Cutting-Edge Liquid Product Recovery (“Pigging”) Technology at Sustainable Food Factory 2025

Tuesday 3 June, 2025

HPS Product Recovery Solutions, the global leader in Advanced Liquid Product Recovery (a type of ‘pigging’) technology, has announced it is participating in Sustainable Food Factory 2025.

Taking place on 11th June at Derby Arena, the event is the UK’s premier conference dedicated to decarbonisation and environmental sustainability within the food and beverage manufacturing sector.

Sustainable Food Factory brings together industry leaders, decision-makers, and technology providers to explore new and innovative ways to reduce emissions and environmental impact across supply chains.

Peter Elgar, Executive Chairman at HPS, said:

“When it comes to sustainability, few sectors are more important than food and beverage production.

We all depend on this industry, and how we produce, process, and deliver food and drink must be both efficient and sustainable. Events like this are essential for driving real change.”

HPS’s innovative and unique form of pigging technology plays a vital role in helping manufacturers reduce waste, cut energy use, and improve overall production efficiency.

HPS pigging systems recover up to 99.5% of liquid product from full pipelines, significantly reducing water usage, effluent, product waste, and cleaning chemical requirements - key concerns for any sustainability-focused operation.

“We were part of the event last year and had some fantastic conversations,” Elgar added.

“The quality of discussions, the insight from the presentations, and the networking opportunities were all exceptional.”

Attendees can find HPS at **Stand A1**, where the team will be showcasing how their pigging technology helps companies hit environmental targets without compromising on performance or product quality.

Experts will be on hand throughout the day to share insights and success stories from leading brands in the food and beverage sector.

“If companies want to meet their sustainability goals, adopting the right technology is non-negotiable,” said Elgar.

“And for companies that process liquids — that’s where HPS technology comes in.”

About HPS Product Recovery Solutions

HPS is the world’s foremost provider of hygienic liquid product recovery, pigging, and liquid transfer technology, helping process industries recover product, reduce waste, and improve operational efficiency.

With three decades of experience, offices in the UK, USA, and Australia, and thousands of systems installed globally, HPS continues to lead the way in sustainable process solutions.

In January 2025, HPS was named one of the **Sunday Times Top 100 UK Tech Companies**, recognising its innovation, growth, and global impact.
