ILLUMINATING IDEA COULD HELP CUT 80% OFF YOUR HOME LIGHTING BILLS

The price of heating and lighting our homes seems to be going up every year becoming one of the major outgoings for households across the UK.

But did you know that by replacing traditional high energy incandescent, fluorescent and halogen bulbs, with Light Emitting Diode bulbs or LEDs for short can cut your lighting energy bills by up to 80% in addition to enjoying a much longer life span of up to around 15 years or 30,000 hours per bulb if used for 6-7 hours per night.

And what's more, swapping over needn't cost the earth - with new LEDs starting from £3.99 per bulb - the energy and cost saving soon paying for the outlay of the bulbs.

If you don't know where to begin when it comes to LED lighting, don't worry because award-winning Happy Energy, has just launched a new website Happy LEDs – www.happyleds.co.uk – providing a range of state of the art LED bulbs, ceiling lights, fluorescent light, spotlights and flood lights for use in both domestic and commercial applications which you can buy on line and have delivered straight to your door.

“The vast majority of people do not realise how much energy traditional bulbs use and by fitting new LEDs how much can be saved, not just in terms of energy usage and energy bills but in terms of replacement costs also. Replacing bulbs is one of the simplest and most effective ways to cut energy and can improve the quality of the lighting in your home," said Adrian Wright of Happy LEDs.
