

## Innovation Funding: £14 Million to Catalyse Energy Ideas

Thursday 13 November, 2014

Innovate UK has just opened the latest round of the Energy Catalyst competition to provide investment and support to help your business innovate at the time, in the way and at the scale that you need it. The funding will help take your energy idea from concept to pre-commercial readiness.

**Three energy challenges** We can no longer take energy for granted. Now is the time to find solutions to reduce emissions, improve security of supply and reduce cost. £14 million will be invested to help find solutions to address this energy trilemma.

The UK has a legally-binding obligation to ensure that 15% of our total energy must come from renewable sources by 2020. Other opportunities to develop innovative new products and services are presented by domestic policy and legal requirements, such as:

- the statutory requirement that UK greenhouse gas emissions must be reduced by 34% by 2020 and 80% by 2050 (based on 1990 levels)
- the security of an estimated 85GW indigenous supply requirement in the UK by 2020
- the need to provide affordable energy for all

The Energy Catalyst was set up by Innovate UK, the [Engineering and Physical Sciences Research Council](#) and the [Department of Energy and Climate Change](#).

If you're an innovative business or researcher from any sector, and think you could help develop solutions to the energy trilemma, [apply for funding through our Energy Catalyst competition](#).

There are three categories of funding - [technical feasibility](#), [technology development](#) and [pre-commercial technology validation](#).

The competition is open for applications and this round of funding closes on 29 April 2015.
