

Innovative Financing Concepts for Business Energy Costs

Monday 31 August, 2020

Kent-based 4 CleanTech Ltd. is offering its customers innovative, green energy concepts without capital expenditure.

4 CleanTech strives to help its customers reduce the cost of their energy by supplying and operating on-site energy generation technologies, without the need for any capital expenditure (CAPEX) by the host customer.

The company offers two contract options for Combined Heat and Power units (CHPs):

PPA - The 4 CleanTech Power Purchase Agreement (PPA) is suitable for companies across the commercial sectors that have a requirement for heat and power. The customer benefits from a fully-funded commercial installation of a CHP unit, and in return, purchases the generated electricity and heat over an agreed term, which is usually 10 years. With the PPA solution, customers can save up to 15% of their energy costs per annum compared to their current grid prices.

CHP-PA - For its clients in the anaerobic digestion sector, 4 CleanTech offers the CHP power agreement for anaerobic digestion plants (CHP-PA). This solution is ideal for AD plants that require a new CHP. The CHP-PA includes the financing of a new CHP and a full servicing and maintenance contract.
