

INNOVATIVE HEAT: ARC THERMAL SOLUTIONS INTRODUCES THE LAVA DESK ZONE

Thursday 13 February, 2025

Cutting-edge technology meets sustainability for enhanced comfort, efficiency and productivity in the workplace.

Chesham, 11th February 2025 – ARC Thermal Solutions, a leading provider of energy-efficient heating solutions, is proud to unveil its latest innovation: the **LAVA Desk Zone**. Designed to revolutionise workplace comfort, this advanced infrared heating system delivers targeted warmth right where it's needed—**directly at your desk**.

A Smarter Way to Stay Warm at Work

As the demand for energy-efficient heating solutions continues to grow, ARC Thermal Solutions is at the forefront, providing **cost-effective** and sustainable alternatives. The **LAVA Desk Zone** is a game-changer for office and home workers alike, offering:

- **Personalised** warmth – targeted heating for individual workspaces
- **Sustainable** efficiency – ultra-low energy consumption with minimal running costs (£0.03/hour on full setting)
- **Sleek** and adaptable design – a discreet, stylish addition to any desk setup (incl. sit-stand desks)

The system includes two components:

- **LAVA Desk Top** – a free-standing infrared heater placed on the desk
- **LAVA Desk Sub** – an under-desk mounted heating panel for all-around comfort

Studies (TU Dresden) show that considerable cost savings of up to 30% can be achieved using the LAVA Desk and that a workplace can be heated for as little as £41 per year.

“Energy efficiency and user comfort have always been at the heart of what we do,” says **Andrew** Bloore, Managing Director at ARC Thermal Solutions. “*With the LAVA Desk Zone, we’re bringing cutting-edge infrared heating to workspaces, offering a smarter and more sustainable way to stay warm without the high energy costs.*”

Sustainability at the Core

For ARC Thermal Solutions, sustainability isn't just a trend, it's a commitment. As businesses and individuals seek **eco-friendly** heating solutions, the LAVA Desk Zone provides a practical way to reduce reliance on traditional heating systems, lowering both **carbon** footprints and **energy** bills.
