Keystone University Ireland Solves the Mystery of the Lost Island of Atlantis

Thursday 16 January, 2020

Keystone University Ireland has solved one of the greatest mysteries of human history by finding the Lost Island of Atlantis.

Dublin, Ireland – Jan. 16, 2020 – Keystone University Ireland has solved the mystery of the Lost Island of Atlantis & has published an explosive video called "Atlantis Ireland" on YouTube that provides over 1,000 pieces of evidence proving that Ireland is the Lost Island of Atlantis.

According to their findings, Ireland is the legendary lost island of Atlantis while Newgrange in Ireland's Boyne Valley is the circular temple of Atlantis and probably the oldest temple on earth. The video proves that the Irish were the first people in the world to develop an advanced civilization, including boats, fishing, agriculture, construction, metalwork, language, mathematics, sports, music, philosophy, and astronomy.

The ancient Irish sailed the world giving the gift of civilization to others, not to build an empire but to push the human race forward.

"It was the Ancient Irish who gave the gift of civilization to a barbaric world. During the dark ages, Ireland's spectacular history was mutilated by her enemies. It's time to set the record straight," said a spokesperson for Keystone University.

Stone age constructions such as stone circles, mounds, cairns, and dolmens have been found in virtually every country on earth, proving that the entire world and not just Ireland has a spectacular ancient history. The most spectacular Stone Age constructions are found in Ireland's Boyne Valley while the Island of Ireland has an estimated 100,000 Stone Age constructions—thought to be more than the rest of the world put together. The Irish Tree alphabet Ogham was the world's first written language and is as old as the Stone Age itself while the old Irish Gaelic language is the missing 'Indo-European' mother tongue that scholars have sought for centuries and is the root of the world's languages.

Irish DNA shows up in the unlikeliest of places. Over 1,000 red and fair-haired mummies have been found in Egypt while red-haired mummies have been found all over the world. Many of the Egyptian Pharaohs had red hair while Tutankhamun is from the same genetic gene pool as the Irish.

Plato's legend of Atlantis was mostly true - it combined two places into one legend, a lot of exaggeration and some historical errors. The Lost City of Atlantis that Plato described was actually an early Irish settlement called Cerne in Mauritania, Africa near the Atlas Mountains. The Richat Structure, also known as the Eye of the Sahara, is what remains of the Lost City of Atlantis today.

Keystone has corrected the biggest error in Plato's legend of Atlantis and set the record straight that it was the warlike Amazons and not the Atlantean Irish, that attacked Greece and waged war in the Mediterranean. Atlantis Ireland and much of the world was devastated by a huge tsunami, floods, and epic rainfalls triggered by a large comet impact near the Puerto Rico trench 11,600 years ago. This comet impact ended the Younger Dryas mini ice age period and was the source of the world's great deluge legends.

Keystone is a new type of university whose mission is to build the world's best university, a centre of excellence that pushes the human race forward. It offers highly intensive seminars in Dublin, Ireland. These seminars are available to anyone regardless of background. Students fly in from all over the world to learn advanced cutting-edge material that is not available anywhere else on the planet.
