KwikPro, the world's most versatile power tools, to launch on Kickstarter for crowdfunding pre-orders on 30th April 2019

Thursday 25 April, 2019

KwikPro power tools are to be offered for pre-order backing on Kickstarter.com from 30th April 2019, as part of a global crowdfunding campaign by Power Tool Systems Limited. KwikPro, the world's most versatile power tool system, is an innovative new product which is aiming to revolutionise the way power tool users work. www.KwikProTools.com

The cordless KwikPro system is uniquely versatile and will offer a full range of both professional and DIY grade 18-volt power tool sets, each in one convenient easy-to-transport case. KwikPro sets are light, easy to use, compact and extremely portable. They offer easy access to a full range of power tools making faster working times possible.

Robert Fowler, engineer and founder of Power Tool Systems, has pioneered KwikPro's exclusive SlideDrive ™ technology which saves space and weight for easy transport. Each KwikPro set will feature cordless motor-handles and a full range of tool-heads plus a dedicated tool-belt for safe, hands-free carrying. One version will even offer remote control, a further unique innovation for working in difficult to access places.

The KwikPro system is designed to streamline the way power tool users work, as Fowler explains; "Shifting loads of power tools in separate cases to different job sites is very inefficient, it wastes time, energy and money, and can also increase the danger of accidents and injuries. KwikPro sets are practical one-case solutions which make it easy for power tool users to speed-up the time it takes to get the tools they need to and from job-sites without needing to leave them in their vehicles where they can often be vulnerable to theft."

Fowler has enjoyed a successful and diverse career in engineering, working on leading edge technologies from Hovercraft to Electric vehicles. He developed his own design of electric cars and has converted conventional cars to EVs, way ahead of governments and car manufacturers who did not believe that electric cars could be viable or commercially successful.

"The new technology behind KwikPro could help revolutionise the power tool industry. Just as Tesla is leading modernisation in the car business, KwikPro plans to do the same in the power tool world. KwikPro backers will have the opportunity to be in at the start of much-needed innovation which aims to shake up the market and give the existing brands something to think about."

Fowler consults on "all things EV" and has extensive experience of battery powered engineering, knowledge that he has put to good use during the development of the KwikPro system. It is this engineering expertise and vision to spot the potential for a market that Fowler believes will attract crowdfunding for his new pioneering range of power tools.

KwikPro systems will be available in sets which will feature high-performance 18-volt motor-handles powered by lithium batteries and a selection of interchangeable tool-heads. The motor-handles, tool-heads and batteries slide together to create a full range of both professional and DIY grade power tools, including: unique two-way drills, impact drivers, a grinder, saws and a multi-tool.

Three KwikPro sets will be offered as Kickstarter backer rewards at exciting introductory prices: Gold Diamond with 2 remote control motor-handles and 10 tool heads; Gold with 2 motor handles and 10 tool heads; and Silver with 1 motor handle and 5 tool heads.

Prices will be competitive with conventional professional and DIY power tools from established brands.
