

Large majority recognises disinformation as danger to democracy

Wednesday 28 February, 2024

The German population is concerned about disinformation being disseminated deliberately over the internet. They fear that political opinions and elections are being influenced in this way. The political class, civil society and the media must confront this challenge. Comparison with the United States shows that polarisation boosts awareness of disinformation.

Gütersloh/Berlin, 28 February 2024. In the opinion of 84 per cent of the German public, disinformation disseminated deliberately over the internet presents a large, or even extremely large, problem for our society. This is the outcome of the Bertelsmann Stiftung's study "Disconcerted Public". "Most people are by now aware that disinformation poses a danger to democratic society. An attempt is being made, for example, to influence elections and to undermine confidence in politics, political parties and the media. This development presents a challenge, particularly with a view to the current super election year, which must be solved so as to safeguard our liberal democracy," Bertelsmann Stiftung executive board member Daniela Schwarzer believes.

More than 90 per cent of respondents said the motive behind this disinformation was to influence political opinion in the population. In consequence, respondents noticed disinformation most frequently in connection with disputed and controversial issues, such as immigration, health, war and the global warming crisis.

Greater awareness of the problem in the US

The polling data also reveal that insecurity caused by and perception of disinformation are more pronounced in the US than in Germany. "Respondents in the US more frequently hold politicians and political parties responsible for disinformation and view the opposite political camp as the source. This reveals the polarization in the US, which is cropping up increasingly during the election campaign," Kai Unzicker, a Bertelsmann Stiftung expert on social cohesion, says. The authors believe that Germany needs better guidelines. "Social networks should be obliged to embed factchecking and confidence assessments," Cathleen Berger, a Bertelsmann Stiftung IT expert, says. Checking and reporting information should in general be made easier for users. In addition, independent monitoring of digital content by multiple non-state actors is needed, she says.

Additional information:

For the "Disconcerted Public" representative online survey commissioned by the Bertelsmann Stiftung, 5,055 people in Germany and 2,018 in the United States from the age of 16 were polled between 4 and 17 October 2023. The opinion research company pollytix strategic research gmbh conducted and evaluated the survey. This study is part of [Upgrade Democracy](#), a Bertelsmann Stiftung project.
