Launchnodes helps to support the launch of Professional Services in AWS Marketplace

Friday 4 December, 2020

Launchnodes, a provider of beacon and validator nodes for Ethereum 2.0 in AWS Marketplace, announced today that it is participating in the launch of Professional Services in AWS Marketplace. Amazon Web Services (AWS) customers can now find and purchase professional services from Launchnodes in AWS Marketplace, a curated digital catalog of software, data, and services that makes it easy to find, test, buy, and deploy software and data products that run on AWS. As a participant in the launch, Launchnodes is one of the first AWS Consulting Partners to quote and contract services in AWS Marketplace to help customers implement, support, and manage their software on AWS. Click here https://aws.amazon.com/marketplace/seller-profile?id=0eee06cf-d077-4219-9d46-642372b9df1b for more information.

As organisations migrate to the cloud, they want to use their preferred software solutions on AWS. AWS customers often rely on professional services from Launchnodes to deploy and optimise their software in the cloud. Until now, AWS customers had to find and contract professional services outside of AWS Marketplace and could not identify software and associated services in a single procurement experience. With professional services from Launchnodes available in AWS Marketplace, customers have a simplified way to purchase and be billed for both software and related services in a centralized place. Customers can further streamline their purchase of software with standard contract terms to simplify and accelerate procurement cycles.

“Launchnodes is proud to support professional services in AWS Marketplace,” said Jaydeep Korde, founder and CEO. “Our team is dedicated to helping companies stake Ethereum, build decentralised financial services (DeFi) and find the complete cloud solutions they need to innovate and use the cloud. Now, our customers can access thousands of cloud software solutions and our associated services to help them implement staking and DeFi services on AWS, in AWS Marketplace.”

Launchnodes makes it easy to stake Ethereum on mainnet by running validator and beacon nodes on AWS. Through AWS Marketplace, Launchnodes provides enterprise clients with a strategy and technology review, assessing clients’ Ethereum 2.0 and DeFi staking solutions from a technical and functional perspective.
