

Michael Smith Engineers Ltd Launches Two New High-Performance Pump Ranges from Finish Thompson Inc.

Monday 19 May, 2025

Michael Smith Engineers Ltd, the UK's leading pump specialist, is pleased to announce the addition of two cutting-edge pump ranges from Finish Thompson Inc. (FTI), a global leader in the corrosive chemical transfer industry.

The new **UCR** and **UCP** series—additions to FTI's renowned **ULTRAChem®** line—are ANSI-dimensional, magnetically driven lined-centrifugal pumps designed to deliver exceptional reliability and durability in the most demanding chemical transfer applications.

The UCR series is engineered for maximum corrosion resistance, making it ideal for extreme chemical processing environments. With a pure ETFE housing lining, barrier liner, and over-moulded magnets, the UCR pump is specifically designed to withstand harsh chemicals. It is perfectly suited for applications such as plating, mining, chemical and metal manufacturing, and fume scrubbing.

The UCP series offers a cost-effective alternative while still delivering impressive chemical resistance and hydraulic performance. Constructed from a combination of polypropylene and ETFE, the UCP provides a budget-friendly solution without compromising on the ULTRAChem line's hallmark durability and efficiency.

"We are delighted to bring the UCR and UCP series to the UK market," said **Jason Downing**, Sales Director at Michael Smith Engineers Ltd. "Our customers in the chemical industry already rely on the ULTRAChem range for its outstanding performance. These new additions offer even greater flexibility, reliability, and value—meeting the diverse and demanding needs of corrosive liquid transfer."

With decades of experience handling challenging liquids—from acids and solvents to slurries and flammable compounds—Michael Smith Engineers is trusted by industries across the UK for reliable and expert pump solutions.
