

Navigating the climate risk & sustainability horizon: Climate Risk and Sustainability in Re/insurance USA 2023

Thursday 28 September, 2023

The countdown has begun for the highly anticipated [Climate Risk & Sustainability in Re/insurance USA 2023](#) conference, set to take place on November 13 - 14 in the city of Chicago.

Hosted at the Hilton Embassy Suites, Chicago Downtown, Magnificent Mile, this pivotal event will run in conjunction with the flagship Underwriting Innovation USA 2023 conference, offering attendees a unique opportunity to engage with leading decision-makers and subject matter experts over two action-packed days. It is billed as the only event in 2023 dedicated to mitigating climate risk for insurance and the transition to net zero.

Senior executives responsible for influencing their companies' climate and sustainability strategies will hear from more than 20 senior executives and experts in their field. The conference is designed to provide attendees with the essential tools, industry contacts, and technological insights required to thrive in an environment characterised by climate-focused commercial opportunities, emerging regulatory shifts, and vital decarbonisation strategies.

The event underscores Intelligent Insurer's unwavering commitment to empowering industry players with the networks, insights, and knowledge required to advance their careers and drive the evolution of the re/insurance industry.

Attending Climate Risk & Sustainability in Re/insurance USA 2023 are over 20 senior executives from leading US insurers, including Liberty Mutual, Manulife Investment Management, Markel, American Family Insurance, Munich Re, Gallagher Re, FM Global, Zurich NA, Kita, ItascaRe, examining the risks and opportunities the industry must grapple with.

The expert speakers will cover five essential themes: exploring climate-focused profit opportunities; developing and implementing decarbonisation strategies; navigating changing climate and ESG regulations; mitigating climate risks for long-term resilience; and addressing underwriting challenges in a changing climate landscape.

Alex Hackett, Senior Conference Producer at Intelligent Insurer and organiser of the inaugural event had this to say:

"The Climate Risk & Sustainability in Re/insurance USA 2023 conference is not just an event; it's a critical forum where industry leaders converge to confront the pressing challenges of our time. As we navigate the shifting landscape of climate risk and sustainability, this gathering will spark essential dialogues and empower decision-makers to shape the future of re/insurance. We are excited to host this event, uniting industry experts in the quest for resilience, innovation, and sustainable progress."

The conference will deliver a powerful combination of in-depth case studies, interactive roundtables and lively panel debates designed to deliver the strategic insight that insurance executives need to instigate and deliver innovation in this fast-evolving space.

The speakers and panellists are all experienced insurance professionals able to speak from years of personal experience working on the frontline of what is a rapidly changing landscape as climate risks and sustainability becomes a frontline issue for the industry.

Here's a snapshot of what some of the speakers have said:

"Opportunities from climate risks can come in new ways to serve customers through products or services. Ultimately, these will help address risks that customers face. There will be transition risks related to the transition to a no/lower-carbon economy as well as physical risks related to the physical impacts of climate change." - Jonathan Charak, VP Emerging Solutions Director, Sustainability Underwriting, Zurich NA

"Overall, re/insurers are adopting a multi-faceted approach to climate risk mitigation, combining technological advancements, risk assessment tools, sustainable investments, and collaboration to enhance resilience in the face of climate change. One of the most useful tools are Catastrophe Models. These models consider historical data, geographic information, and climate projections to estimate
