nCrypted Cloud Launches UK-based European Division

Thursday 7 August, 2014

nCrypted Cloud today announced the opening of its European operation. nCrypted Cloud is the secure collaboration application that seamlessly integrates with leading cloud storage services such as Box, Dropbox, Egnyte, GoogleDrive and OneDrive. It allows individuals to securely share and collaborate in the cloud, while enterprises gain better manageability over sensitive data with advanced forensic auditing, remote wipe, and access controls.

The new nCrypted Cloud office is located at 86-90 Paul Street, London EC2A 4NE. Dennis Allan, the software industry executive behind the new venture, has worked with international brands such as Progress and Verdasys. He has assembled a strong team of individuals with relevant technical and business experience. Matt Baron (Head of Sales) comes from an IT security background with many years' experience in bringing new technology to the market; Ricky Massin (Head of Business Development) is a software and business development executive with a strong track record in generating new business across several industry sectors; and Louise O'Hara (Head of Marketing) is an experienced marketing and business development professional and business owner with experience in the technology and Information Security sectors and proven success in helping start-ups grow.

"I am excited to bring nCrypted Cloud to Europe, starting with the UK market," said Allan. "We already have a fantastic team on the ground here and are in discussion with companies in various sectors that are already very interested in what we have to offer. There is nothing quite like nCrypted Cloud, and it's exhilarating to be demonstrating the technology to our prospects, who seem delighted in having a much-needed solution to their user and enterprise cloud collaboration needs."

nCrypted Cloud's Enterprise Edition employs the company's patented key management system to generate multi-identities for proper segregation of corporate and personal data. Enterprises that need to maintain privacy and compliance postures - even across multiple cloud storage environments -- gain robust auditing and forensics, including the ability to "unlink" a user across all devices with a single click.

With a single click, users can manage file and folder permissions right in their familiar storage environment, or use collaborative tools such as "trusted sharing" via an email link, securely sharing folders even without a cloud storage or nCrypted Cloud account.

"We're pleased to announce the roll-out of nCrypted Cloud into the United Kingdom and the rest of Europe via nCrypted Cloud EU," said Nick Stamos, nCrypted Cloud Founder and CEO. "With this experienced team of business and technology talent and working with our cloud storage partners we're ideally suited to support the needs of the BYOD (Bring Your Own Device) workforce and those faced with the challenge of protecting sensitive data."
