

NFT STARS Releases a Prince Constantijn van Oranje Inspired NFT Drop

Friday 2 July, 2021

The new multi-chain NFT marketplace [NFT STARS](#) is preparing for its launch and will debut with a drop entitled 'Singularity', the artwork that was inspired by Constantijn van Oranje, Prince of the Netherlands. The prince is making a huge impact on the development of the Netherlands's startup ecosystem. The art presents an opportunity to explore the Oranje-inspired vision of humans and Artificial Intelligence (AI) co-existing and to discover the new marketplace's unique products and services.

'Singularity' is Redefining the Human

The 'Singularity' artwork dives into a reality where the human is a future super-intelligence who has managed to unleash its full potential through the power of AI. The token introduces the merging of technology and the human brain as 'evolution' rather than 'a revolution' and emphasizes the future accomplishments it could bring.

The artwork was inspired by Dutch tech ecosystem breakthroughs in the fields of AI, blockchain, and quantum computing. In the past few decades, the Netherlands has become a thriving nest for startups and entrepreneurs and is one of the technology centers of Europe. The country's progress in this area was aided by its special envoy - Prince Constantijn van Oranje. Prince Constantijn is a special envoy for Techleap NL, an accelerator for the startup ecosystem in the Netherlands. The prince also advises companies and the European Commission on their digital innovation strategies. This is why the anonymous creator has chosen Prince Constantijn van Oranje as the face of the 'Singularity' collection.

The work is an animated token featuring Constantijn van Oranje and will be auctioned on the 3rd of June at 10:00 UTC.

"We are excited to begin our journey as an NFT marketplace with such a bold and meaningful collection as 'Singularity'. Our team at NFT STARS is inspired by the advancements that the Netherlands has made in the spheres of blockchain and AI and the role that Prince Constantijn van Oranje plays in it. We wanted to pay tribute in the form of an exclusive collection" - Dan Khomenko, CEO of NFT STARS.

About NFT STARS and What to Expect from the New NFT Marketplace

In the first quarter of 2021, interest in the possibilities offered by non-fungible tokens spiked, particularly regarding digital art. By April, the total NFT market capitalization reached [\\$27.9 billion](#). The NFT sector has reached all-time high sales with people ready to pay almost \$70 million per piece. The sudden interest in NFTs has pushed more artists, athletes, and musicians to go digital, facilitating market speculation and creating an unfavorable environment for young artists who have yet to build a name for themselves. NFT STARS aims to shift the focus from NFT speculation to art appreciation - all its products and services follow this paradigm.

Selective Approach to Artists

Every artist featured on the platform first goes through the executive board's screening process or is picked by the community. NFT STARS hosts only 3 carefully selected auctions a day. Thus, its featured artworks don't get lost among thousands of other pieces published only for the sake of creating NFTs or joining the hype.

Special Treatment

In return, artists receive special treatment that includes Gas-free minting. NFTs are minted at the time of sale and the purchaser pays the Gas expenses for the minting process, so artists don't have to when minting their work.

Artists that have a premium account also have their own personal manager and can consult with the legal department on any matter. NFT STARS also facilitates collaboration among its artists by enabling joint NFT ownership. A group of artists can create an NFT as a team and the proceeds from its sale will be redistributed among all the team members.

Augmented Reality Exhibitions

NFT STARS strives to close the gap between digital and traditional art. The platform achieves this by giving its artists the chance to see their work in a personalized gallery and to host their first show. The gallery is powered by AR technology and is available to experience on the screen of a smartphone. To ease entry into the world of NFT, NFT STARS has gone one step further - in July this year, it will be hosting its first offline NFT exhibition in Melbourne, Australia.

Fractional Trading

The sudden popularization of collectibles has led to an enormous increase in NFT prices, leaving many users priced out of the market. To make the market a more inclusive space, NFT STARS enables fractional NFT trading. Instead of paying millions for one art piece, a user can own a fraction of it and in this way, build up their collection.

Initial NFT Offering

For startup founders, NFT STARS offers a brand new way of funding - Initial NFT Offering. A startup goes through two rounds of funding, whereby users purchase NFTs to farm project tokens.

These are some of the killer features of the new NFT marketplace. Follow NFT STARS social media channels to learn the latest news on upcoming drops: [Twitter](#), [Instagram](#), [Facebook](#) & [Telegram Chat](#).
