- Nokia's first Worldwide IoT Network Grid (WING) deal in Latin America, enabling TIM to expand IoT services in Brazil
- TIM's enterprise customers will be able to offer IoT services across various industries faster by using the fully virtualized WING infrastructure, offered as a managed service
- Widespread adoption of IoT technologies estimated to add USD 200 billion to Brazilian economy by 2025*

12 December 2019

Espoo, Finland – Nokia has signed a contract with telecommunications giant TIM to provide Internet of Things (IoT) services to its enterprise customers in Brazil. Using the fully virtualized Nokia Worldwide IoT Network Grid (WING) managed service offer, TIM and its enterprise customers across industries, such as automotive and agriculture, will be able to capture IoT opportunities faster and more securely.

The Brazilian market is the largest IoT market in Latin America, with widespread adoption of IoT technologies estimated to add USD 200 billion to the country's economy by 2025. Nokia's first WING deal in Latin America enables TIM to leverage new business models to tap this opportunity and generate additional revenue streams. Additionally, incremental services, such as device management and analytics, will help TIM extend SIM management capabilities to create value added opportunities.

WING will enable local and multinational companies to benefit from global IoT services. It features a distributed architecture that maintains all user data in-country, such as in Brazil, to remain compliant with data sovereignty and privacy laws.

TIM's enterprise customers will be able to monitor and manage in real-time their devices, ranging from asset tracking and status sensors for logistics industries to the fully connected car with on-board diagnostics and telematics. As part of the deployment, the Nokia IMPACT IoT platform, which simplifies the process of bringing and scaling multiple applications onto a single platform, will provide IoT device management and service capability exposure.

Alexandre Dal Forno, Head of Corporate Products and IoT Solutions, TIM Brazil, said: "At TIM Brazil we are seeking to leapfrog the IoT market and see strong growth on our B2B business. We are looking forward to engaging with other global IoT players in order to bring the best possible IoT experience to our customers. Nokia WING will enable us to accelerate our capabilities to support our enterprise customers' IoT needs and tap into the billion dollar IoT market opportunity."

Sanjay Goel, President of Global Services, Nokia, said: "This deal will empower TIM Brazil to provide its enterprise customers with IoT services to address their growing needs. Additionally, we will work on unlocking new IoT solutions that can be applied in various industries to help enterprises undergo digital transformation."

About TIM Brazil

TIM remains true to its mission of connecting and caring for each one so that everyone can do more. Therefore, it focuses on the strategic pillars of offer, infrastructure, efficiency and customer experience, based on an internal culture of accountability and on the change of processes and platforms allowing digital transformation. Our new brand signature - "Evolution never stops" - underpins the company's commitment to its Investment Plan and the goal of becoming the best telecommunications operator in Brazil.

Since 2015, the company has been leading 4G coverage in the country as well as a benchmark in mobile and land line networks. It is also the only telecommunications company in the Novo Mercado segment of Brazil's stock exchange B3, the highest level of corporate governance, as well as being the telecommunications operator for the longest consecutive time featured in the Corporate Sustainability Index (ISE).
