

NTT Ltd. to power virtual 'global stadium' experience for Tour de France fans

Wednesday 26 August, 2020

The world's largest annual sporting event will be brought to race fans across the world through an innovative tech experience, delivered remotely for the first time by NTT, due to Covid-19

London, UK, 26 August 2020: Today [NTT Ltd.](#), the official technology partner to [A.S.O.](#), announced it will bring the Tour de France 2020 to fans through innovative technology, which will allow them to watch the race from their homes in a unique way and be part of a 'global stadium' experience. Due to the impact of Covid-19, 70 remote NTT employees will operate from five continents to support the three-week long race that takes place from 29 August to 20 September 2020.

NTT has developed a 'Virtual Zone Technique' that brings together different technologies to deliver its Tour de France services remotely for the first time. This will keep staff safe while supporting the running of the race and providing an enhanced experience for fans.

To create a digital 'global stadium' for fans who can't be at the roadside this year, NTT and A.S.O. have made use of their advanced, real-time, data analytics capabilities. Live data and analytics will be featured across multiple channels including:

- **A brand new Augmented Reality (AR) Data app:** In addition to the live race footage, the app will provide selected users with a unique way of viewing and interacting with live race data and the amazing landscapes of the Tour de France. For the first time, this will allow fans to appreciate the scale of the event in 3D from their home. With an unprecedented view from the sky, they will see the riders among the mountains, valleys, rivers and lakes, and have access to interactive live data on the race whilst feeling like they're actually viewing the race from a helicopter.
- **Additional data for live television broadcast:** NTT Ltd. and A.S.O will provide new data insights and visualizations as part of the live television broadcast. This will provide a fresh way of seeing and understanding the race, and how each team is performing.
- **The [@letourdata](#) social channel:** The data shared across the [@letourdata](#) channel will allow fans to keep up to date with what is going on with the race, even if they're on the move. It will also provide deeper insight into how the cyclists are performing, their team strategies, and predictions from the [#NTTPredictor](#).
- **The official 'Tour de France Fantasy' game:** Gamification of the race will enhance the experience for fans, with machine learning predictions provided by [#NTTPredictor](#) at every stage. Fans are able to immerse themselves in the Tour de France experience, competing with other like-minded fans!
- **The Tour de France [Race Center](#):** The live-tracking platform of the Tour de France has also been completely re-developed for 2020 to enhance the user experience, and leverage cutting edge cloud platform services. Race Centre 2.0 provides a second screen experience, showcasing key race data, live rider telemetry and other insights including race predictions and race commentary.

NTT's managed services will safeguard the operational success of the race. Managed collaboration services will enable the global technology support team to communicate and a secure-by-design approach will enable real-time threat management, ensuring security.

Ruth Rowan, Chief Marketing Officer, NTT Ltd. commented: "This is not just a first for the Tour de France, but a first for sport; everything we would previously have done physically has been moved to a remote environment. Sport has the power to inspire and we wanted the public to enjoy the race this year even if they can't be at the roadside. Our work with A.S.O. has shown how, when we work together, we can find solutions to do great things. Innovation means fans will see the race in a different way, actually get closer to the action and more people than ever before can enjoy it safely."

For its 40,000 employees, NTT Ltd. has also launched its Tour de France Hackfest – a competition where anyone from across the business can suggest future innovations for the race in support of creating the largest connected stadium in the world. The initiative encourages employees to think differently and

celebrates the company's innovation culture.

Rowan continues: "The approach we are taking at the Tour de France this year will revolutionise how sporting events are delivered in the future. We are using technology to take the fan experience to the next level. The new challenges we've addressed in preparing for this year's race are inspiring our team to develop many more fantastic ideas to attract a new generation of digitally savvy fans."

Yann Le Moenner, Chief Executive, A.S.O commented: "Over the last five years, we have built the Tour de France with NTT Ltd. and we have continued our digital transformation journey under unique circumstances this year. People have seen the benefits from sport even during the pandemic. Many people exercised during lockdown and now even more people are cycling to travel around. We can use technology to ensure the fan experience is richer than ever. These changes are good for the world. For example, if we can use the Tour de France as a platform to accelerate cycling in cities, we can improve people's health and lessen our impact on the environment."
