

Powerful Family Balancing.

Monday 30 November, 2020

Livonia, Michigan: Urobiologics LLC discovered a new way to conceive a boy or girl with high confidence instead of just keep trying. They discovered a new phenomenon in women that their menstrual cycles are gender specific. All women have alternating boy-girl conceiving menstrual cycles as shown in the graph. One month is good for conceiving a boy and the immediate next one is that for a girl. PreGender Preconception test guides them in which cycle to try to get the desired baby and in which to avoid. **Guess work is totally gone.** An era of Gender Specific Natural Conception has arrived. Based on the data and their experience so far, it appears that gender selection is genetically controlled process which cannot be influenced by eating or douching with something. Therefore, claims of swaying for desired babies by using any gender diets, gender kits and douches have no basis and are just cashing on the desperation of couples for conceiving a baby of desired gender.

Since there are two types of menstrual cycles, Urobiologics need to test two mid-cycle urine samples from two consecutive cycles which can be legally sent by mail. After testing those, they keep on guiding the couple as to when to try and when to avoid by sending individualized conception plans up to 18 months. Everything is done confidentially via emails.

It is a blessing for fertile couples as well as brides-to-be for planning the future family structure in advance. The days of getting multiple babies of same gender are over.

“Whereas man provides both X and Y chromosome bearing sperms which determine the gender of baby, woman ‘selects’ either X or Y sperm depending upon cycle she is in Women have the power to control the family make-up.” says Dr. Verma, inventor, founder / owner at Urobiologics LLC.

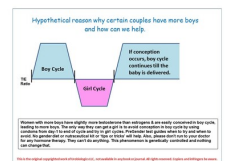

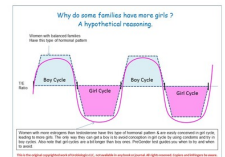

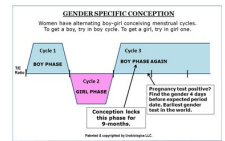

Features and benefits of PreGender Preconception test include.

- Confidentially testing two urine samples before pregnancy, guidance thereafter up to 18 months and baby's gender evaluation as early as the positive pregnancy test is obtained. This total package called Mini-pack 2+1 is being offered for only \$615 at this time. This fee may go up after January 2021.
- All communications about reporting and guidance is done by email.
- All tests are done on urine samples from woman, voluntarily mailed to us through couriers like FedEx, UPS, DHL or USPS. It's legal to ship urine samples under exempt human specimen classification. No travel is involved.
- It uses woman's natural potential to conceive a baby of desired gender without using any medicine, gender diet or supplements.
- Proven concept backed by patented techniques. With our new and updated procedure in August 2020, 95 out of 100 couples would be getting their planned babies.
- NEW TREND: Would-be-brides must get this test 2-3 months before their wedding date. This way she can control her conception to design 1-boy-1-girl family and live happily thereafter. There's no need to get multiple babies of same gender first and then start looking around.
- Couples having multiple babies of same gender must use this service. They get easily conceived in one type of phase. PreGender Preconception test guides them in which cycle to try and which to avoid. This is the only way to balance the family.

About Urobiologics LLC: We are the first one to start urine-based gender evaluation in 1982 and have been developing this gender selection concept alongside. It was so exciting to see for the first time in 2006 that there are two kinds of menstrual cycles. In 2008, we observed that those who conceive in boy phase, get boys and vice versa. We launched PreGender test with a claim of 80% success rate. Now we are world leader in natural gender selection program.
