RELEASE DATE: 19th of October 2021

## Remove Atmospheric Methane to Cool the Planet by 0.4 Degrees

*It is efficient, natural and safe*

Kreuzlingen, Switzerland, 19th of October 2021

The climate crisis calls for immediate action. Enhanced Atmospheric Methane Oxidation (EAMO) can reduce global temperatures by 0.4 degrees. [AMR AG](#) has developed technology for the dispersion of aerosols cooling the planet.

Methane (CH<sub>4</sub>) accounts for 40% of current global warming. One ton of methane is equivalent to 28 tons of CO<sub>2</sub> - regarding its Global Warming Potential over 100 years. The atmosphere contains 150% more methane than it did in 1850. Methane, unlike CO<sub>2</sub>, oxidises in the atmosphere - it breaks into CO<sub>2</sub> and water.

To oxidise methane two elements are needed, sunlight and a catalyst. The catalyst provides a chlorine atom which starts the oxidation but is not consumed by it - and can invoke the process again and again. Sunlight is needed as energy source. This natural process happens every day.

AMR has developed technology which allows the dispersion of a natural catalyst, Iron Salt Aerosol, from decommissioned oil-platforms. The operation requires 20 decommissioned oil-platforms to be transformed to 'Methane Removal Platforms' (MRP). One element of each MRP is a high steel-lattice tower, which will disperse the aerosol at 150-250 m height above sea level. The energy needed for the dispersion will come from wind-turbines located near the MRP.

The MRPs will be placed at locations in the subtropic oceans. Each platform disperses around 45,000 tons of aerosol per year. The process is scalable and its effects can be monitored by satellites. The cost of the material and its dispersion would be around 2,000 USD / ton of aerosol.

The aerosol has beneficial effects in the atmosphere as well as the ocean. Iron fertilizes the ocean, it causes algae to grow. This way EAMO enhances photosynthesis, nature's way to remove CO<sub>2</sub>.

EAMO cannot solve the climate crisis completely. It is, however, a solution which can put immediate brakes on global warming in a safe, efficient and natural way. Rebuilding the global carbon-driven economy will take at least 50 years, we cannot wait that long. Immediate solutions require bold and unusual action, very much like the Covid-crisis did. AMR offers the means to do so.

AMR AG is a small Swiss engineering company - unable to solve the problem alone. Help from industry, governments and individuals is needed to tackle the world's greatest problem, the climate crisis.
