

SAINT-GOBAIN WEBER RENDER SYSTEM FOR BESPOKE CONTEMPORARY NEW BUILD

Thursday 18 October, 2018

Media:

The high performance [weber.rend MT](#) render system from **Saint-Gobain Weber**, the leading UK formulator and manufacturer of innovative materials, systems and solutions for the construction industry, has been specified for a bespoke, luxury private home on the south Hampshire Coast.

Network Weber recommended applicator Complete Rendering Systems Limited of Lewes, East Sussex, carried out the render application for main contractor MGS Building & Electrical Contracts Limited, Botley, Southampton.

"The orientation of this site presented a challenge," says John Saint, director, MGS Building & Electrical Contracts, "but as we come across difficult sites and ambitious architectural designs more frequently, we have to use materials that are suited to the task."

There were two substrates, totalling 360m², which required the application of the lightweight **weber.rend MT** system: the house structure features timber frame with Bluclad render substrate boards, while the garage facility is built of traditional blockwork. Both are ideally suited to the application of the versatile **weber.rend MT** system. The finish colour is white for the majority of the property with the stair core picked out in grey.

Created by the award winning contemporary design practice A R Design Studios, Winchester, specialists in residential and commercial architecture, chief architect Andy Ramus comments that the palette of materials used in the design of the property is intentionally modest and understated: "White and grey render adorn the 'floating' box which accommodates the upper sleeping floor while local stone is used for the walls that dominate the ground floor providing a rugged contrast."

weber.rend MT is a multi-coat system which incorporates glass fibre meshcloth reinforcement and a resin-rich adhesive coat that carries a choice of textured finishes in a wide range of colours. The clean aesthetic lines of this stylish property are enhanced by the striking textured finish.

Bradley Halls, director, Complete Rendering Systems, has considerable experience of [Saint-Gobain Weber render systems](#). "To create the **weber.rend MT** system, we pump spray the first coat of **weber.rend LAC** onto the stable Bluclad boards which provide good adhesion," says Bradley. "We immediately lay in the meshcloth which is covered with a second spray-applied coat of **weber.rend LAC**. We float the surface flat and dry-sponge to achieve a smooth, flawless finish." When dry, **weber PR310**, a pigmented primer, is applied which starts the colour build-up. It also reduces the suction levels in preparation for the top coat to achieve uniform colour and texture. The **weber.sil TF150** textured silicone-based decorative finish coat was hand applied.

Built on the site of a single bungalow this one-for-one property offers spacious accommodation over three floors. It has a lower ground floor with cellar and cinema and an impressive ground floor lounge with large sliding glazed doors. Flush thresholds provide a true sense of inside/outside living while glazing to the bedrooms provides beautiful tree top views of the lake and the four themed private gardens. A moat surrounding the house is crossed via a bridge providing direct access to the main entrance.
