

Say goodbye to huge mobile data roaming expenses from overseas trips

Friday 29 June, 2018

Vilnius, LITHUANIA, June 28, 2018.

Global Wi-Fi provider IUNGO network is launching it's Alpha Software release on schedule, as committed in its roadmap. This invitation-only release will allow Alpha users to be the original participants in testing the first decentralized Global Wi-Fi service, where people and companies will become local internet providers.

IUNGO network will save most travellers from excessively expensive mobile data roaming bills from trips abroad by offering simple and fast Wi-Fi access. IUNGO Network allows users to find a secure WiFi hotspot that matches his or her preferences. IUNGO Network allows users to find- in just a few seconds - a secure Wi-Fi hotspot. With the push of a single button, the IUNGO Network app will seamlessly connect the user to Wi-Fi.

"We are extremely happy to deliver our first release on schedule as stated in our roadmap," said IUNGO network Co-Founder and CEO Ricardas Bernotavicius. "Today, the Global Internet Service Provider market is valued at more than \$620B annually and it's basically controlled by around 20+ major incumbent providers. IUNGO network's business model will allow everyone to become a decentralized Internet Service Provider and increase Wireless internet supply."

Mr Bernotavicius is the Founder of multiple MedTech and IoT companies, a successful entrepreneur with a clear focus on business, media and cryptocurrency.

The Alpha launch of the application will for the first time, allow users to connect their devices to the IUNGO Wi-Fi hotspots. Features will be added to the Alpha version up until its Beta release in Q4 of 2018. Full working service is scheduled to be launched after Beta release in December 2018.

More information about how to join Global Wi-Fi network is available at www.iungo.network.

About IUNGO network

IUNGO is a globally distributed wireless internet service provider built with the help of a Worldwide community. IUNGO network is bootstrapping a community where everyone can assume responsibilities and benefit from the associated rewards for running parts of the service delivery infrastructure. Members can contribute by installing Public Wi-Fi access points on their premises and/or running parts of the service infrastructure.

IUNGO network mission is to democratize how people and businesses benefit from Internet connectivity by becoming the world's largest decentralized ISP.

IUNGO network will rely on the existing physical Internet infrastructure to carry end-user traffic and will form an overlay network with unified end-user identification, authentication and billing systems. IUNGO network will use the Ethereum network to build trusted, transparent accounting and payment infrastructure.
