FOR IMMEDIATE RELEASE

Guangdong, China, & Birmingham UK. 24 August 2021 – Fully British-owned and managed manufacturing company, Shield Works is excited to announce that will be attending their 1st UK Trade Show – Subcon Show in booth H43. The Subcon Show is the UK's premier subcontract manufacturing supply chain event. It provides manufacturing professionals from all industry sectors with the opportunity to meet and source new suppliers and solutions.

Shield Works is helping overseas companies protect their intellectual property in China. Shield Works aims to offer unprecedented access and transparency to their customers, whilst protecting their IP in the process.

Intellectual Property Protection in China has proved difficult for foreign companies for several years due to local judicial protectionism and perceived bias against foreign companies. However, Shield Works is hoping to change that.

China is the world's leading manufacturer and as such attracts a lot of global customers who face these challenges. The protection that Shield Works offers in terms of Intellectual Property Rights has been hard to achieve in China until now. While China has made steady efforts to better protect and enforce IP rights, infringers themselves continue to become increasingly sophisticated. They often exploit procedural loopholes, proactively seek to invalidate legitimate patents and trademarks, deploy advanced techniques such as reverse engineering, and find new ways to infiltrate legitimate distribution and build their parallel networks.

In their 70,000 sqft facility, Shield Works are looking to provide their customers with the added advantages of manufacturing in China, all whilst keeping IP Protection and Quality as the primary focus.

"At Shield Works, we operate with open, transparent, and flexible working practices providing clients with all the usual advantages of China supply with the added reassurance and security of a highly controlled customized tier-one production environment." Said Nick Cunningham, President, and Founder of Shield Works and the C2W Group.

Tightly controlled internal information handling processes, contractual and legal procedural enforcement, and staff hiring/allocation practices along with controlled fingerprint access to all key production areas helps to secure their customers' IP and protect their interests at the source of manufacture.
